Published: 6 December 2011

The article “ α -Pinene nitrates: synthesis, yields and atmospheric chemistry” published in Atmos. Chem. Phys., 11, 6337–6347, 2011 has been retracted. We received the following statement from the corresponding author S. X. Ma:

I hereby request that the paper by Ma et al., “ α -Pinene nitrates: synthesis, yields and atmospheric chemistry”, be withdrawn from publication in ACP. I falsely presented the results, and I, alone, was aware at the time of submission of the manuscript that the data presented by me (specifically the individual isomer and total organic nitrate yields) in the paper were not valid. I very much regret my actions and submit my deepest apologies to my coauthors, to ACP, and to the scientific community.

All authors agree with the retraction of this article.
