

Corrigendum to

“Study of contrail microphysics in the vortex phase with a Lagrangian particle tracking model” published in Atmos. Chem. Phys., 10, 10003–10015, 2010

S. Unterstrasser and I. Sölch

Deutsches Zentrum für Luft- und Raumfahrt (DLR) – Institut für Physik der Atmosphäre, Oberpfaffenhofen, 82234 Wessling, Germany

In the original paper Fig. 6 is not displayed correctly due to technical problems in the typesetting process. This corrigendum shows a corrected version of Fig. 6, now with a legend and 6 instead of 4 panels.

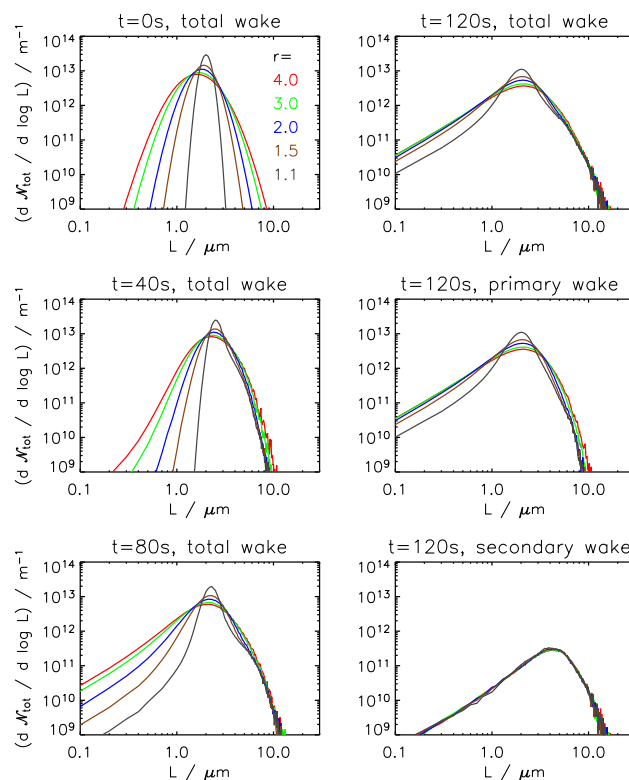

Fig. 6. Size distributions for various widths r of the initial size distribution (see legend) for the LCM-model at $T^*=217$ K and $RH_t^*=120\%$. The time of evaluation and the sampling area is given on top of each plot.
