Supplementary material

Table of Content

S0: Supplementary material for Individual model performances on meteorological variables (U10: 10 m wind speed, T2M: 2 meter temperature, PBL: Height of the Planetary Boundary Layer)	2
S1: Supplementary material for Individual model performances on pollutant concentrations	11
S2 : Supplementary material for Individual model performances on Ozone concentrations	20
S3 : Supplementary material for Individual model performances on Nitrogen Dioxide concentrations	25
S4 : Supplementary material for Individual model performances on Sulphur Dioxide concentrations	30
S5: Supplementary material for Individual model performances on PM ₁₀ concentrations.....	35
S6 : Supplementary material for Individual model performances on PM _{2.5} concentrations	40
S7: Diurnal evolution of the coefficient of variation over different countries.....	45
S8: Description of background sites and annual PM2.5 emissions for the residential sector	47

S0: Supplementary material for Individual model performances on meteorological variables (U10: 10 m wind speed, T2M: 2 meter temperature, PBL: Height of the Planetary Boundary Layer)

Correlations in time and space (Cor.), Biases and Root Mean Square Errors in are computed based on hourly values. Nb is the number of available observations for a given variable.

For MINNI, U10 and T2M are respectively the wind speed at the first level of the model.

Averaged 2m temperature bias (K) for individual models for each campaign (black dots refer to value below the minimum color scale value)

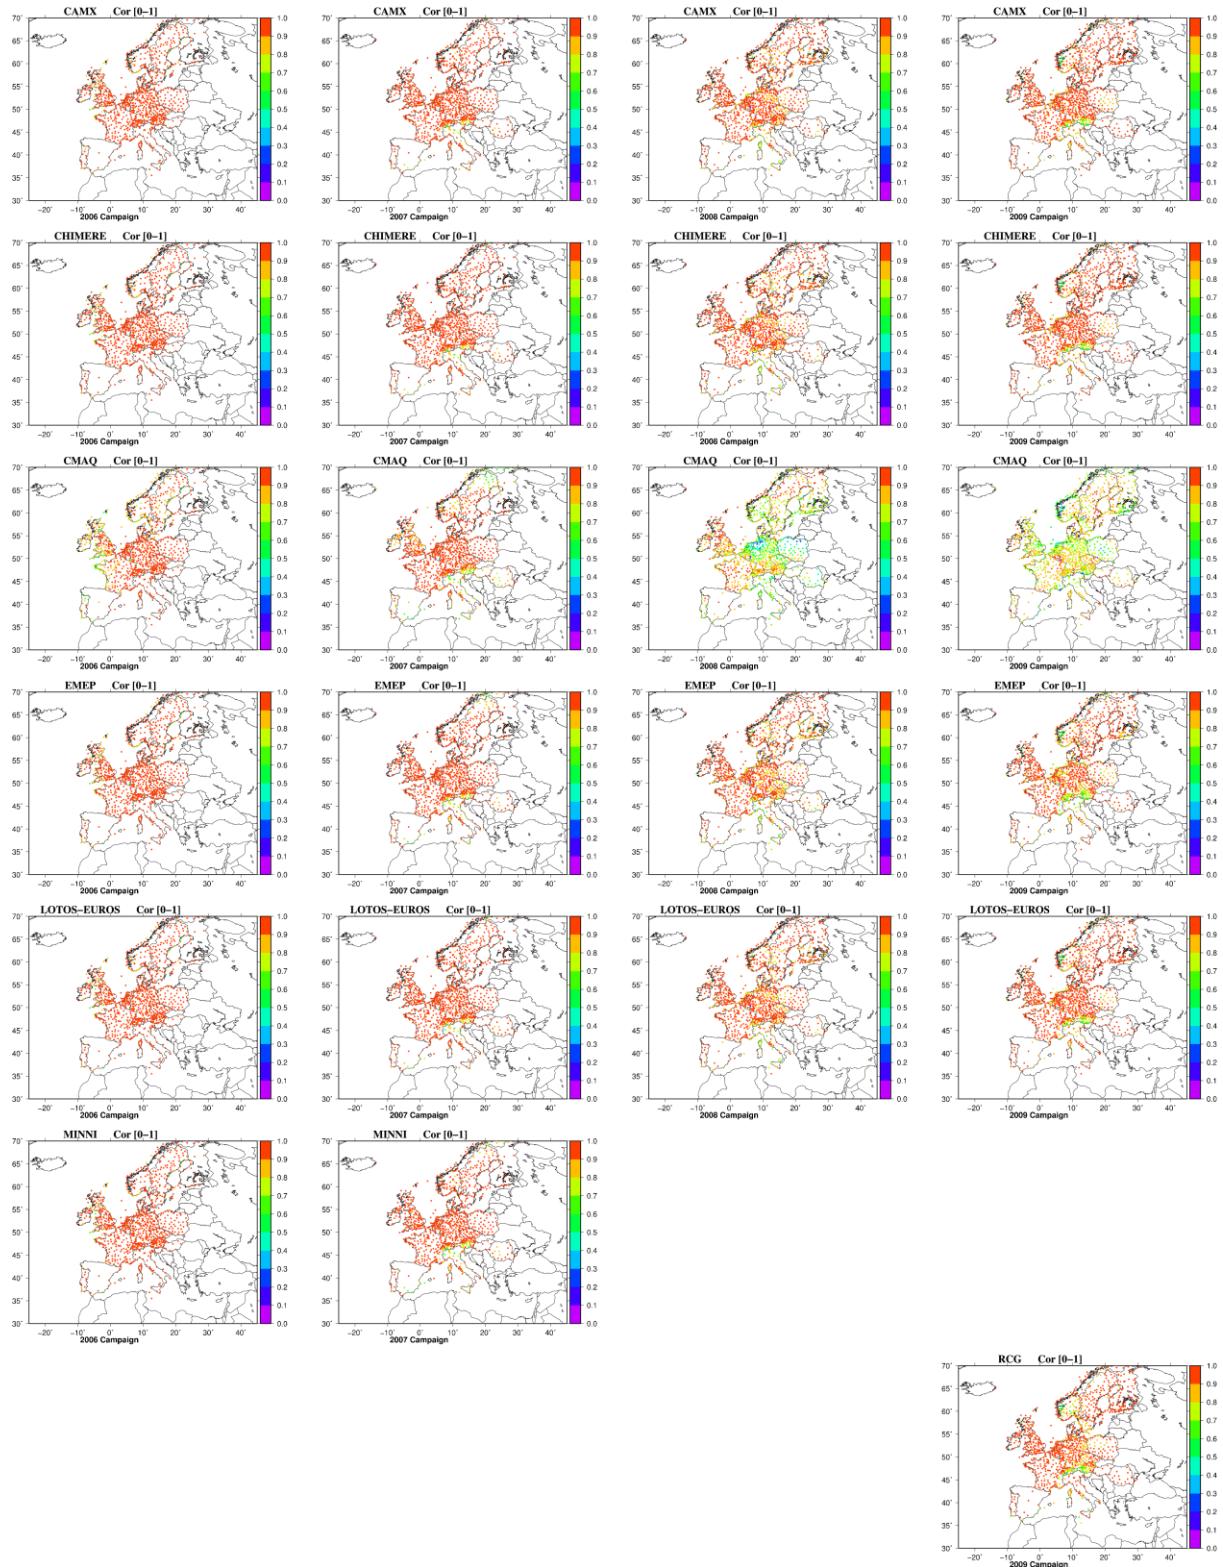

Averaged wind speed bias (m s^{-1}) for individual models for each campaign (black dots refer to value below the minimum color scale value)

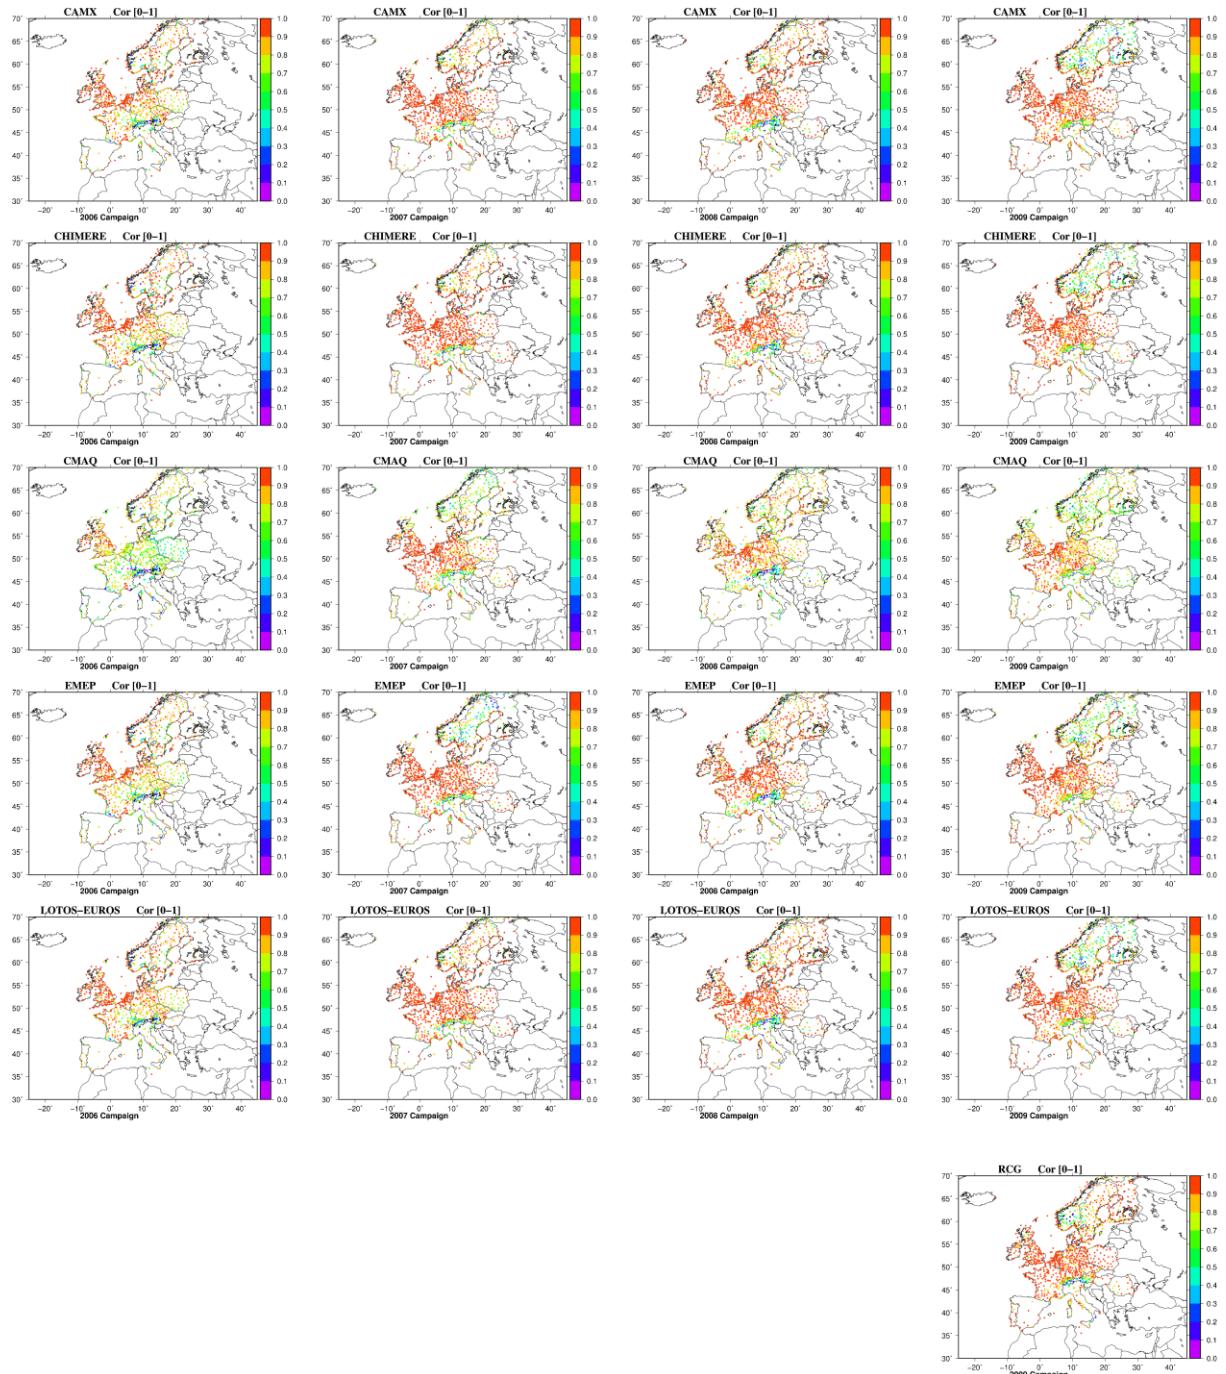

Averaged PBL bias (m) for individual models for each campaign (black dots refer to value below the minimum color scale value)

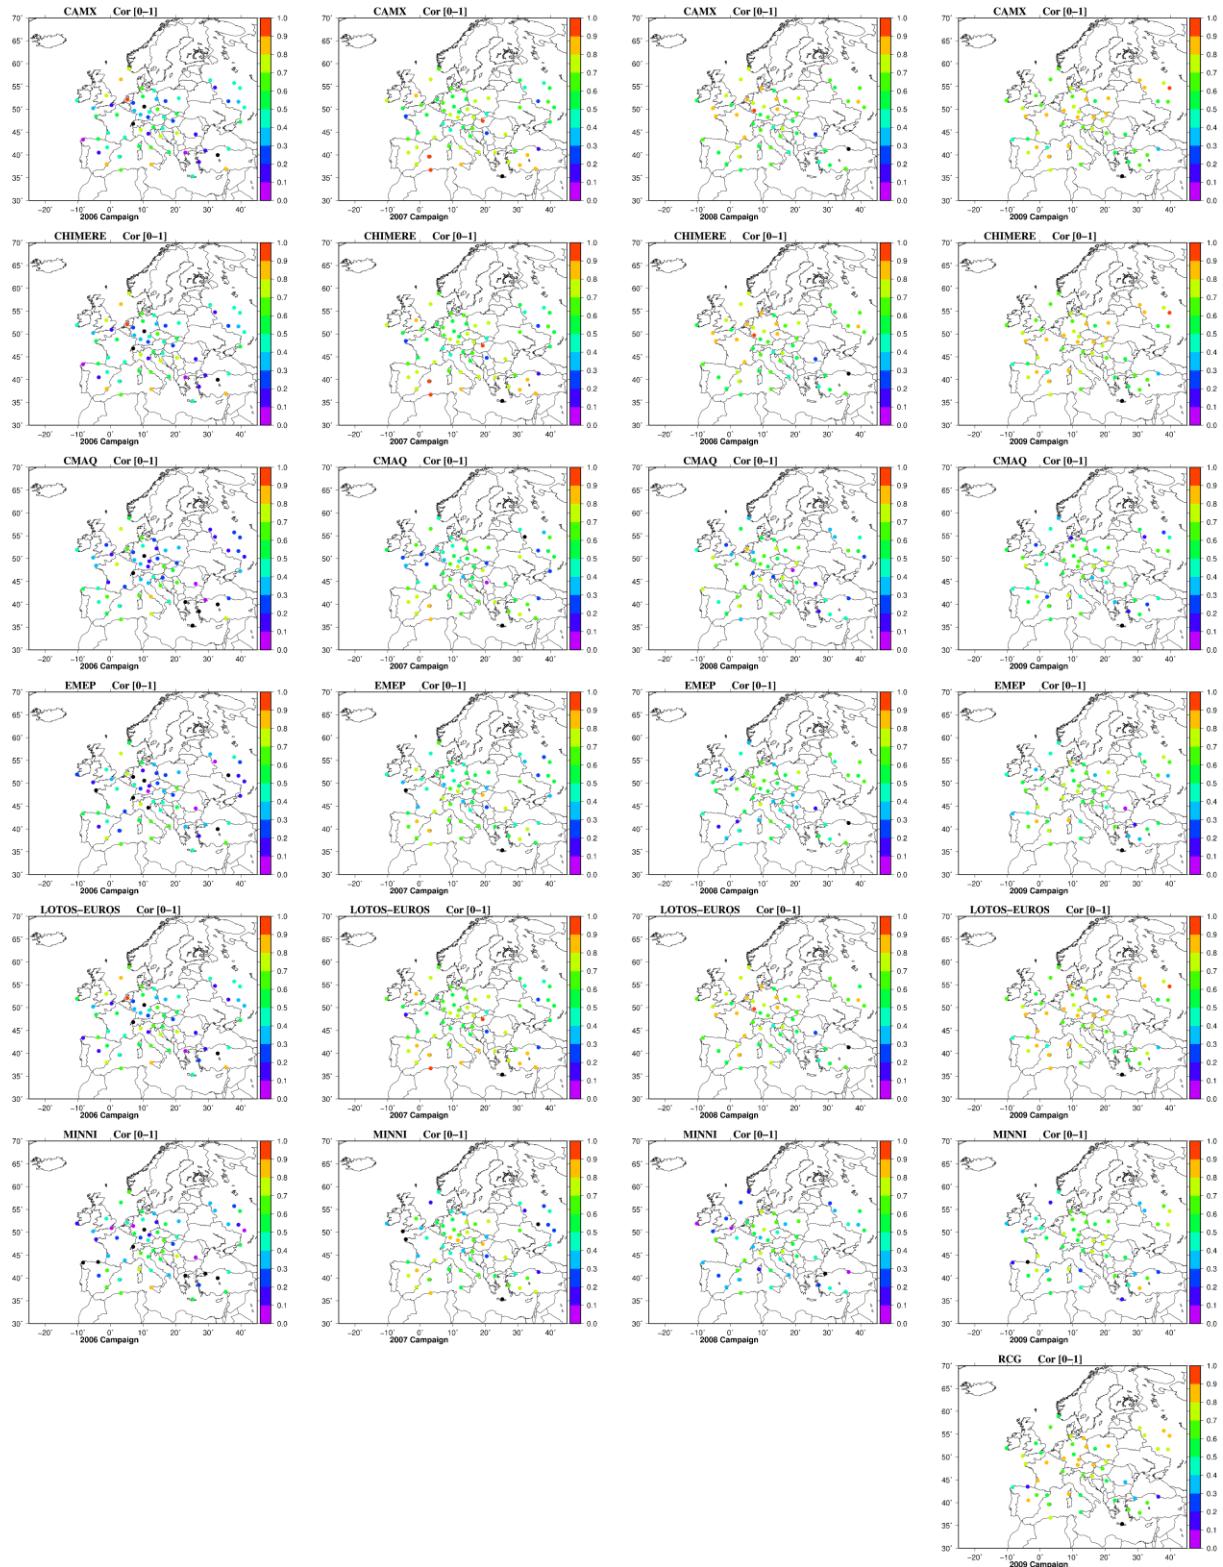

**Averaged 2m temperature correlation (daily basis) for individual models for each campaign
(black dots refer to value below the minimum color scale value)**

Averaged wind speed correlation (daily basis) for individual models for each campaign (black dots refer to value below the minimum color scale value)

Averaged PBL correlation (daily basis) for individual models for each campaign (black dots refer to value below the minimum color scale value)

S1: Supplementary material for Individual model performances on pollutant concentrations

Correlations in time and space (Cor.), Biases (in $\mu\text{g m}^{-3}$) and Root Mean Square Errors in (RMSE in $\mu\text{g m}^{-3}$) are computed based on daily values. Observation values (Obs.) and model values are in $\mu\text{g m}^{-3}$. Nb is the number of available observations for a given pollutant.

S2 : Supplementary material for Individual model performances on Ozone concentrations

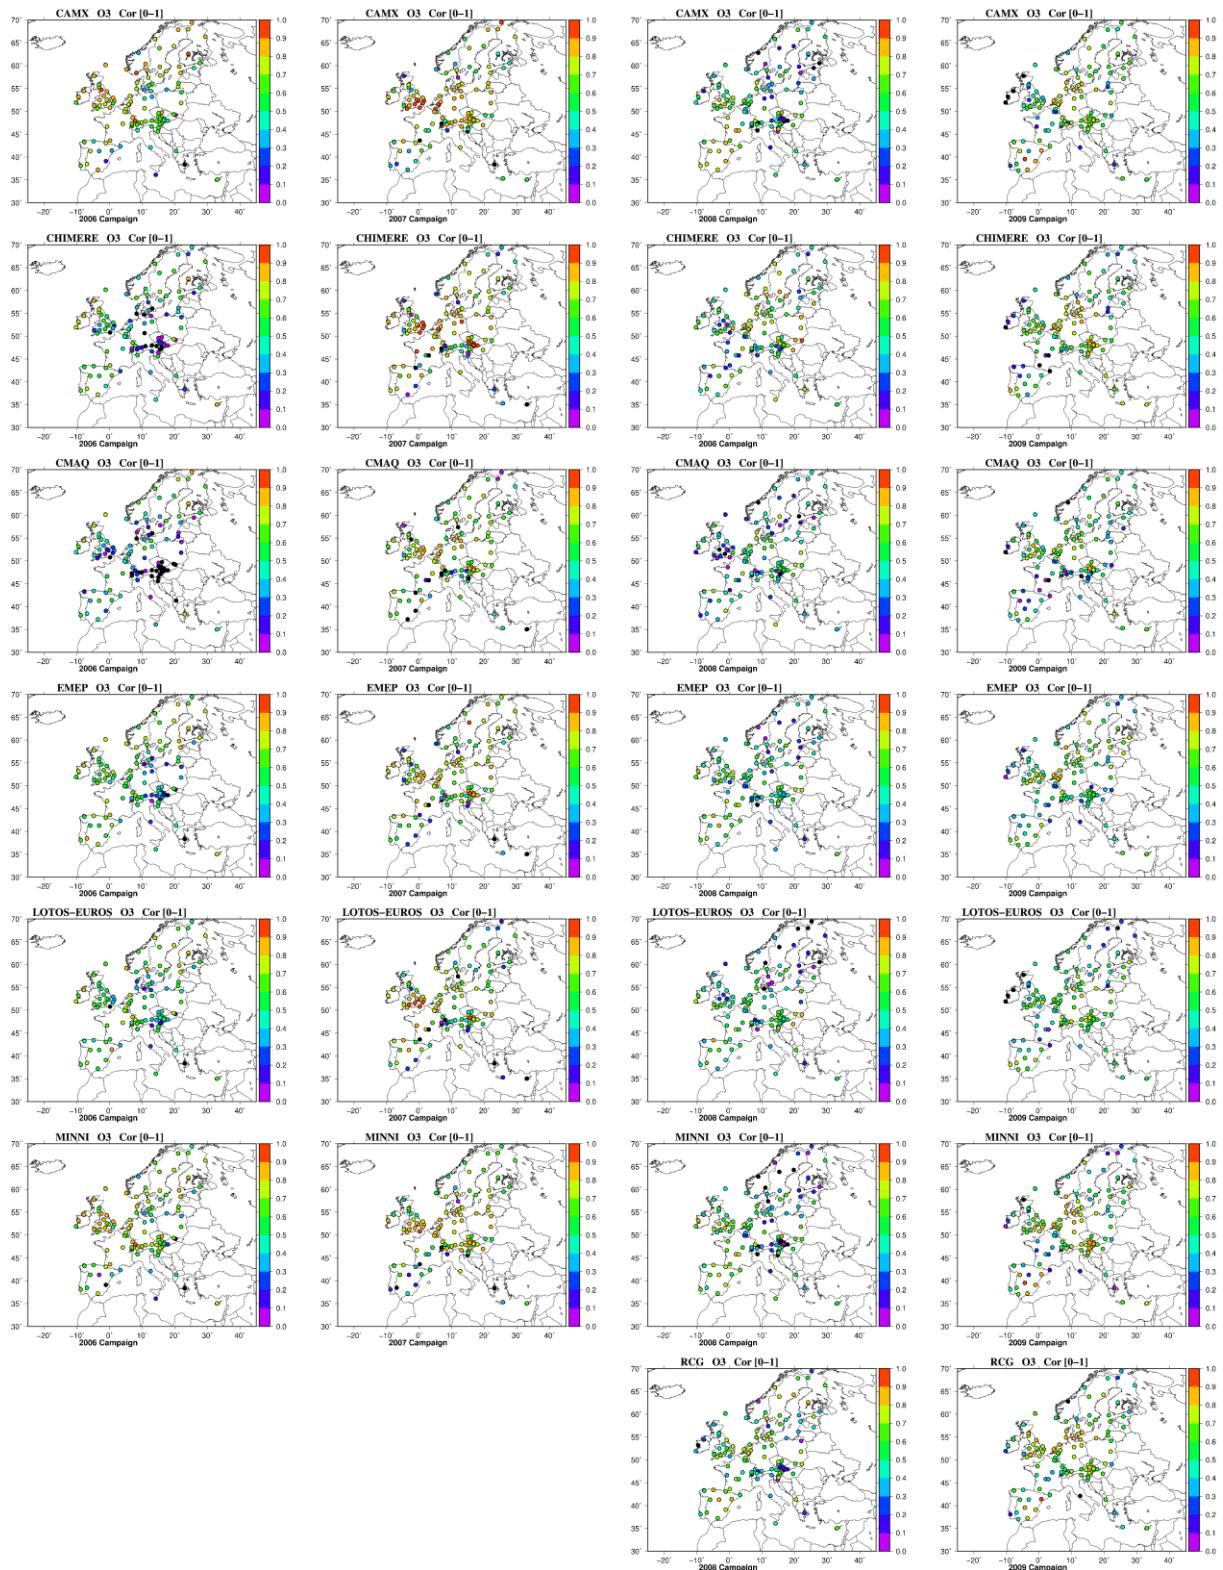

Averaged ozone concentrations for individual models for each campaign

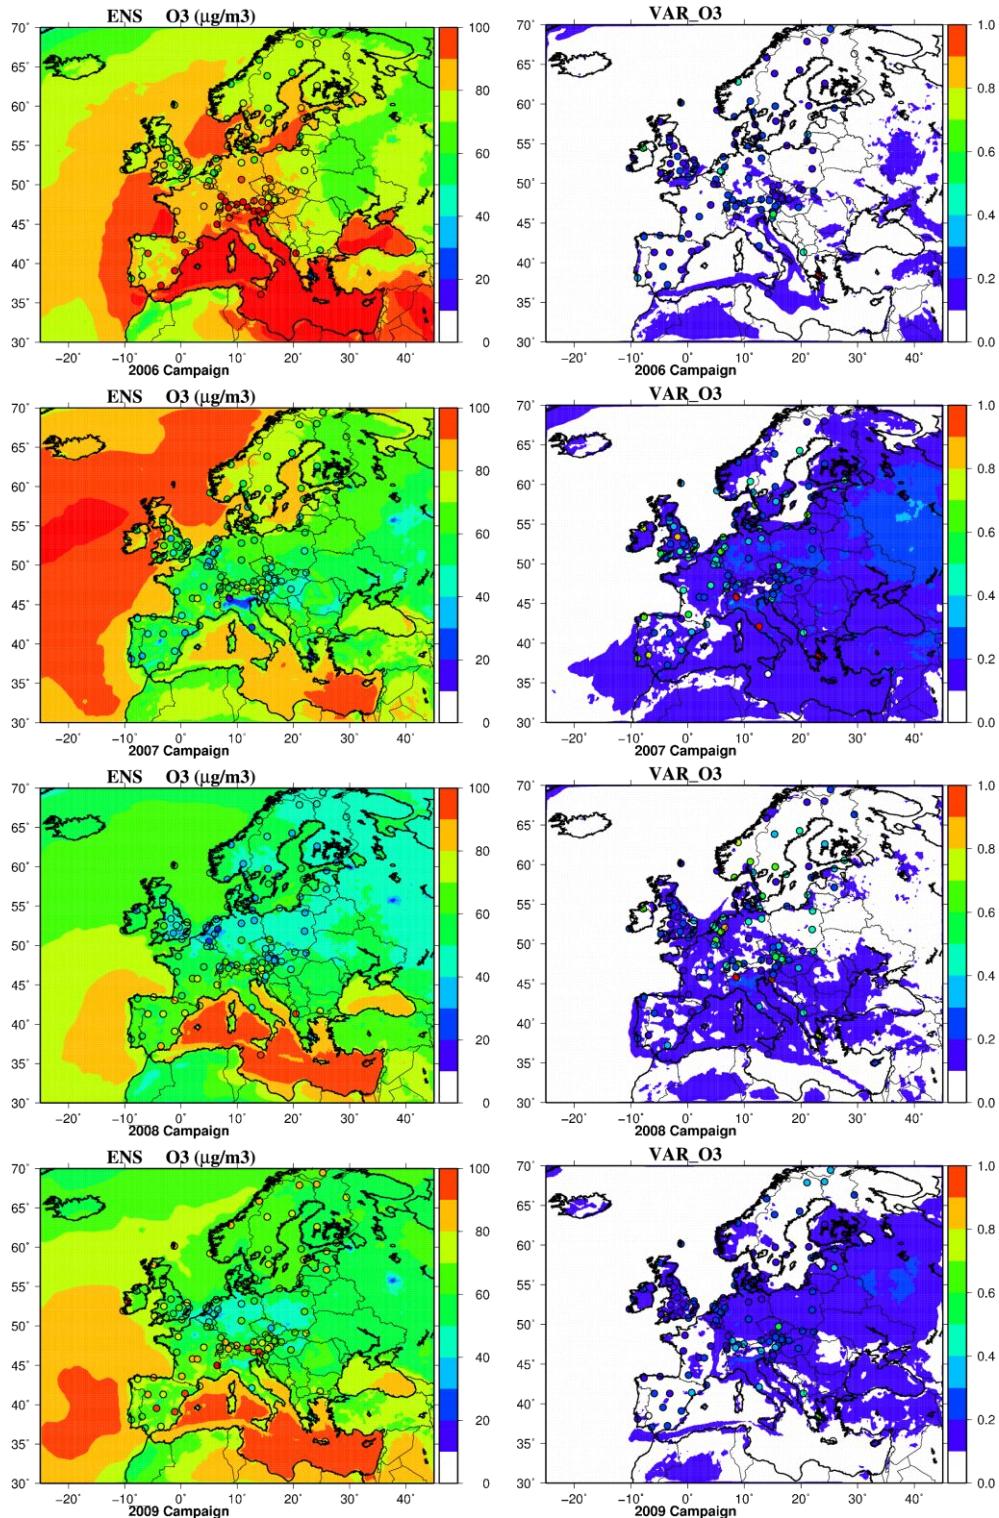

Averaged ozone bias for individual models for each campaign (black dots refer to value below the minimum color scale value)

Ozone time correlations for individual models for each campaign (black dots refer to value below the minimum color scale value)

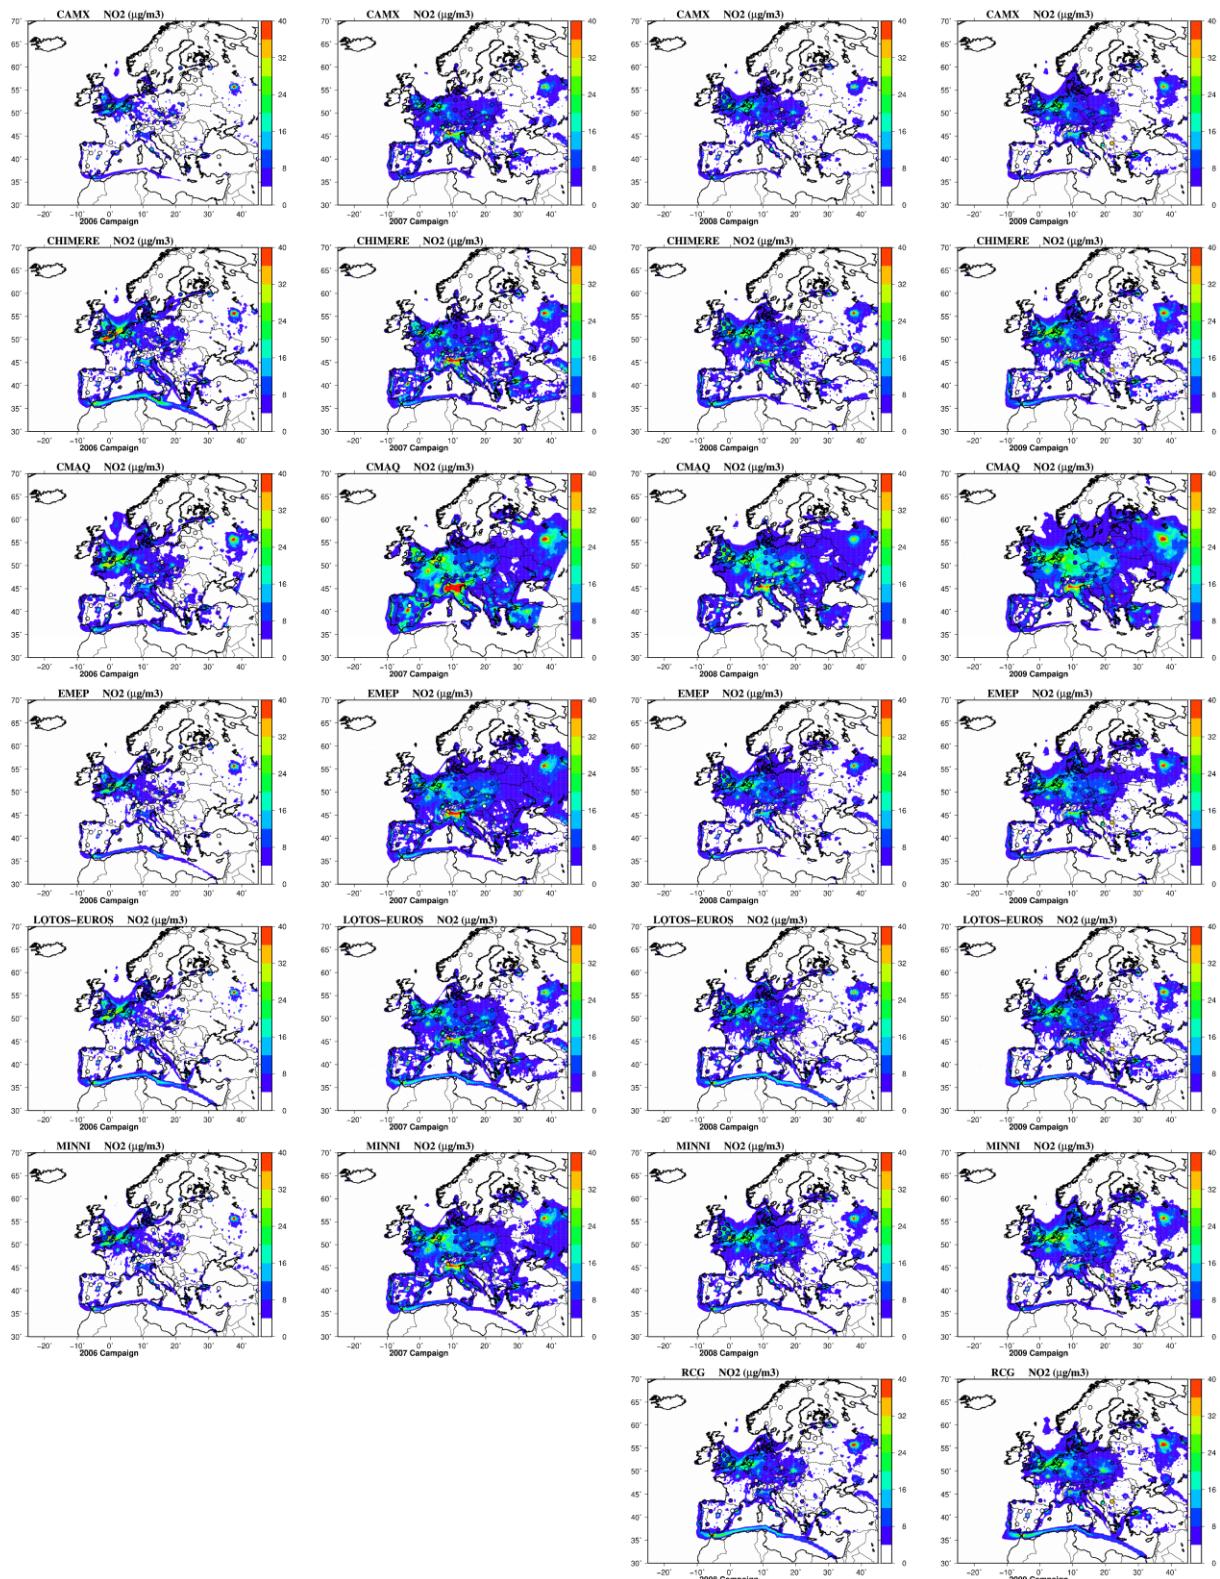

Left column: Average O₃ concentrations (μg m⁻³) of the “ensemble” (ENS) for the four campaigns with corresponding observations (coloured dots). Right column: coefficient of variation of models (no unit) constituting the ensemble with corresponding normalized root mean square errors of the “ensemble” (coloured dots).

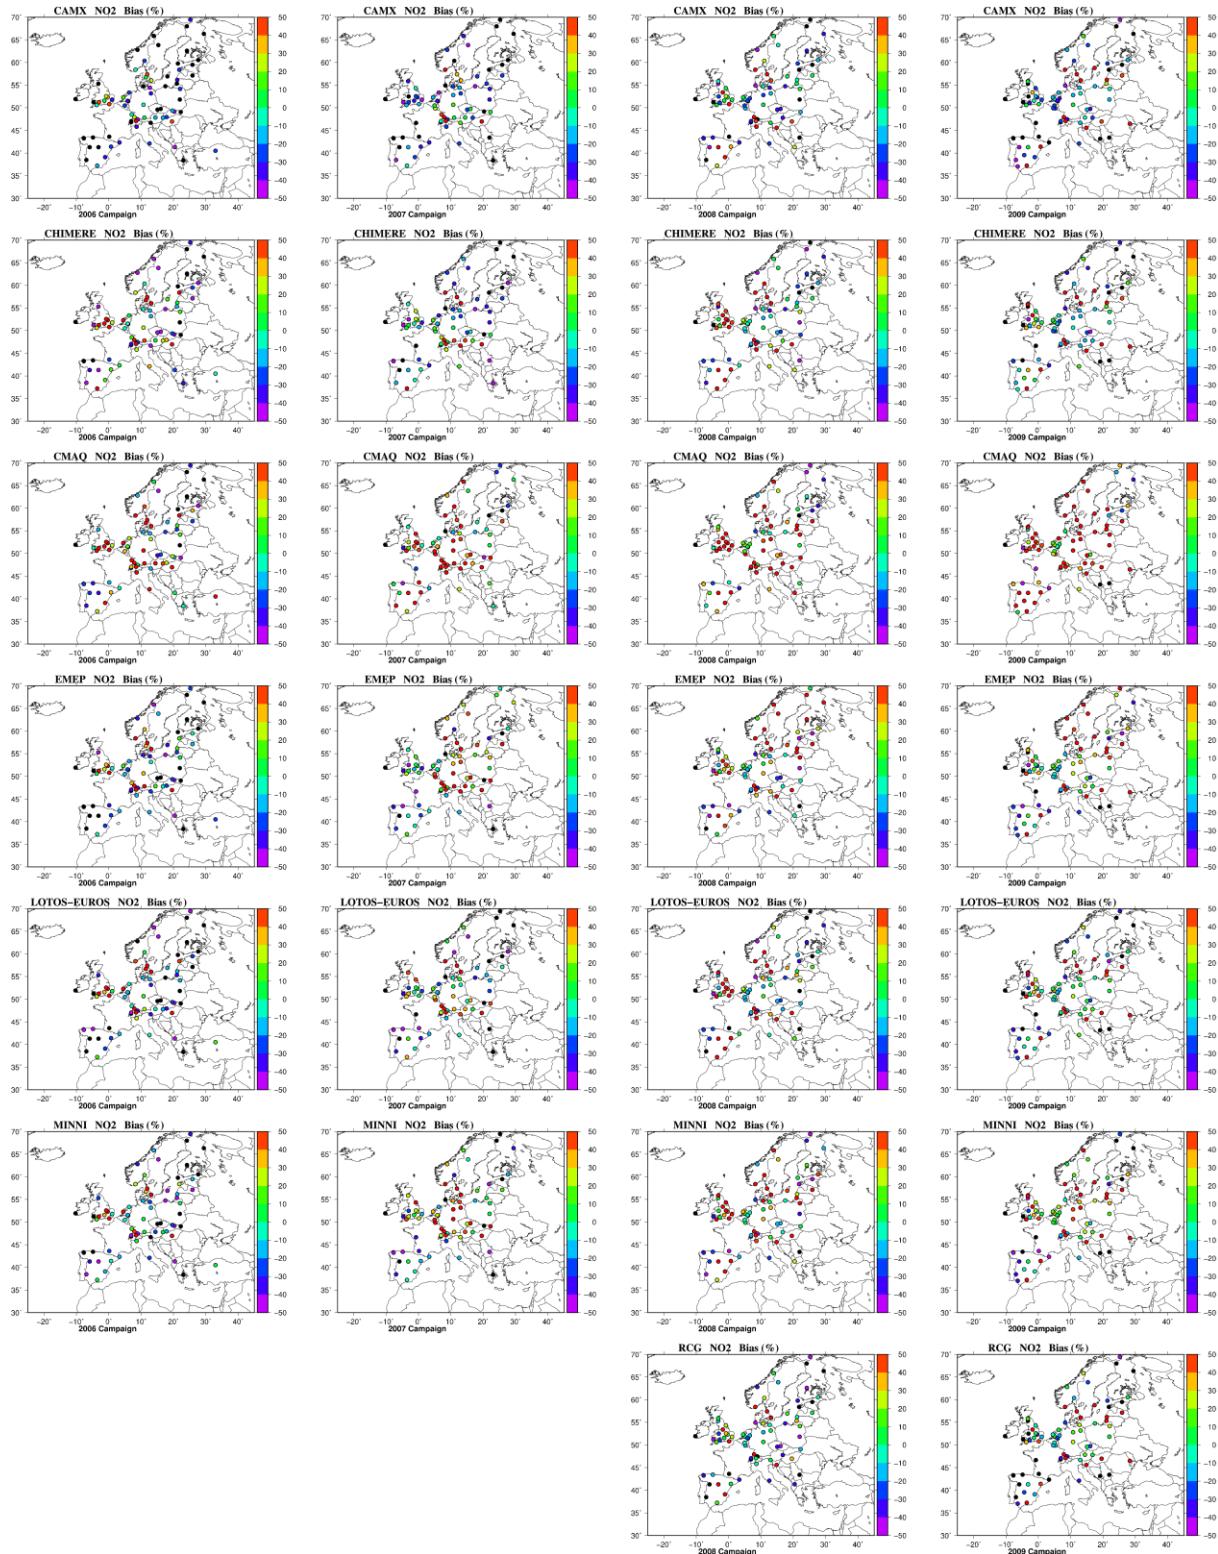

S3 : Supplementary material for Individual model performances on Nitrogen Dioxide concentrations

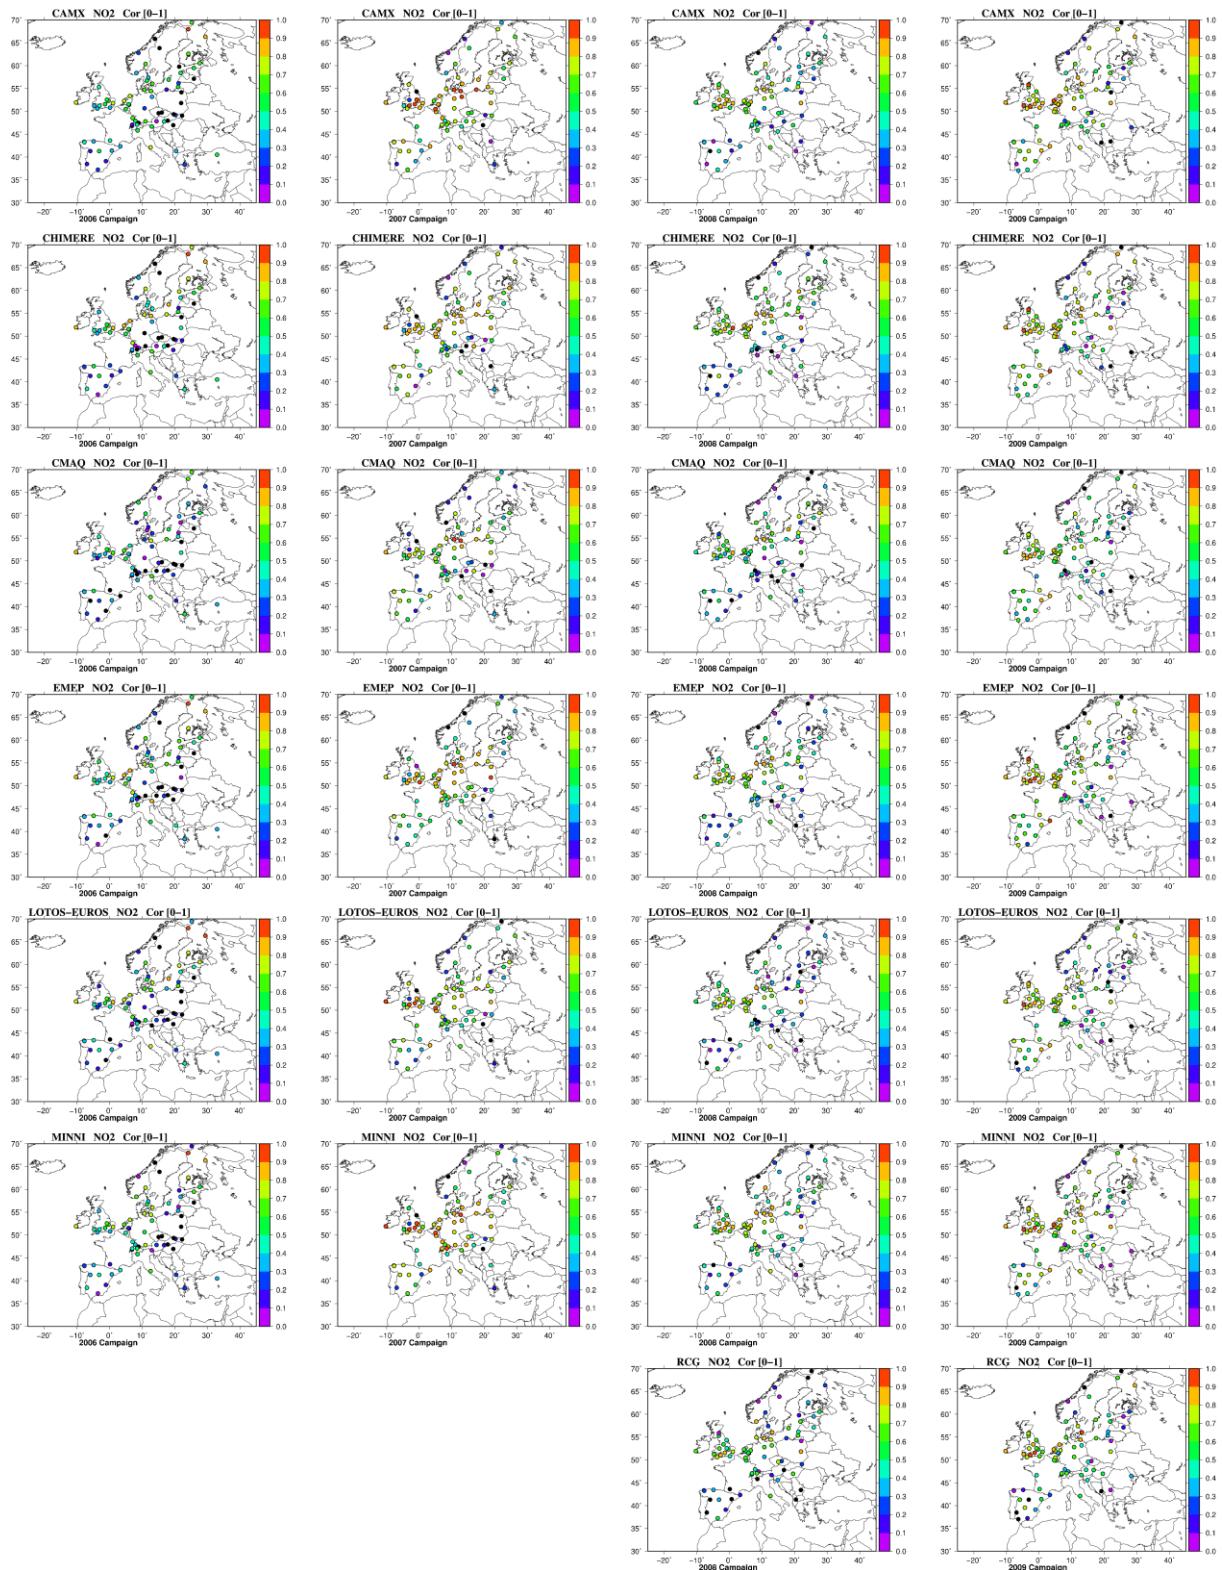

Average nitrogen dioxide concentrations for individual models for each campaign

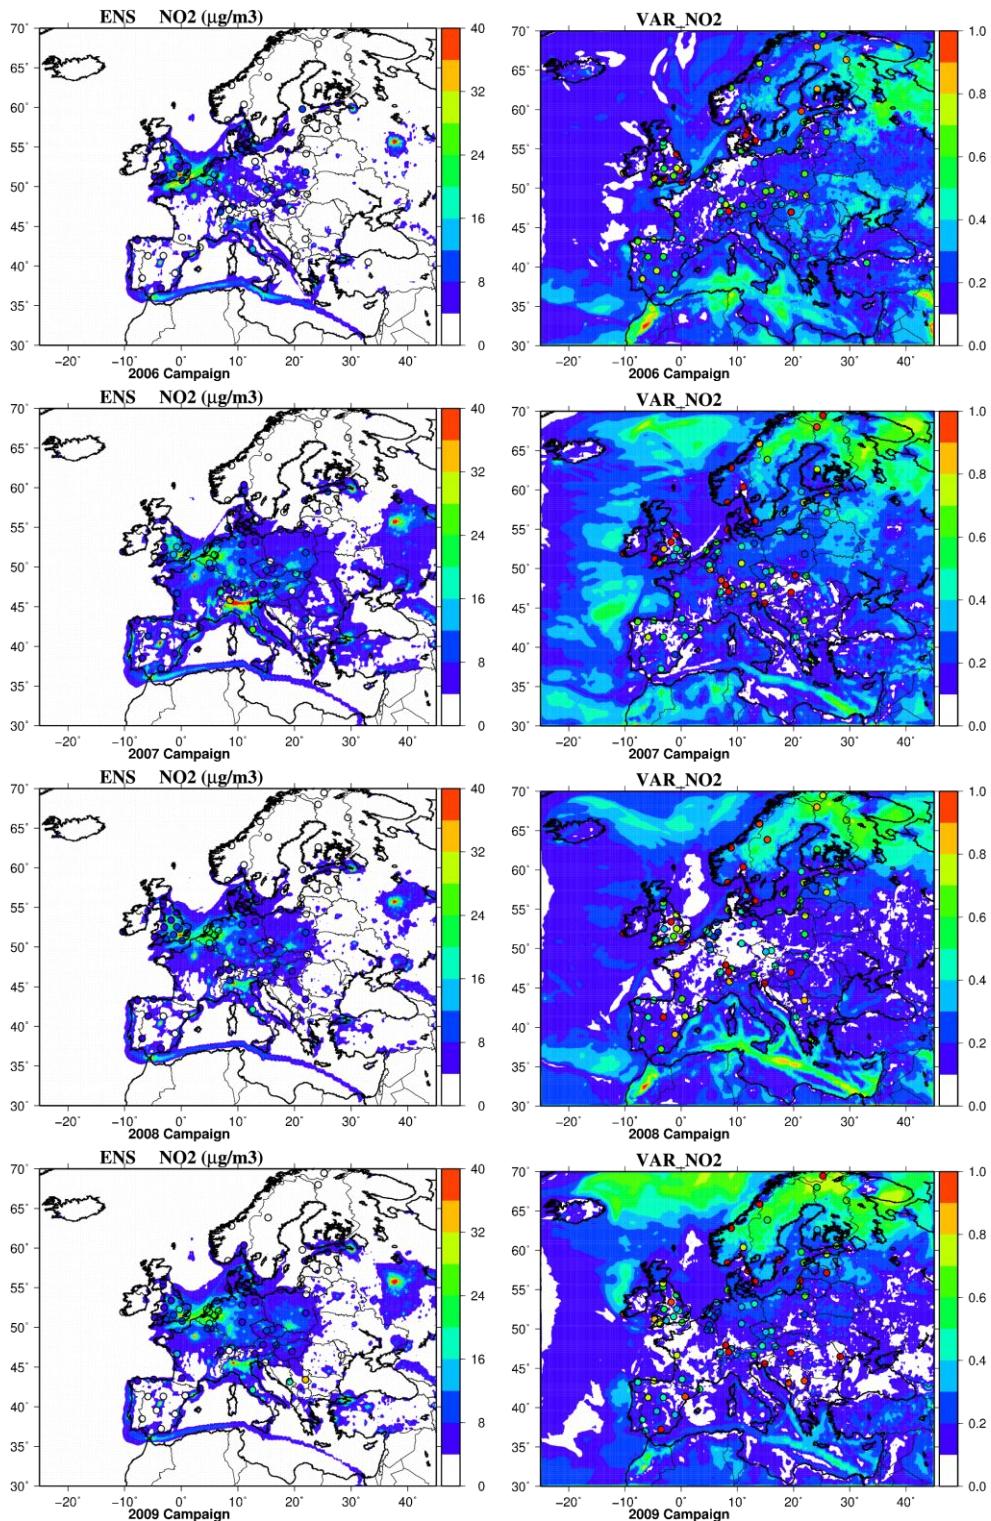

Averaged ozone bias for individual models for each campaign (black dots refer to value below the minimum color scale value)

Nitrogen dioxide time correlations for individual models for each campaign (black dots refer to value below the minimum color scale value)

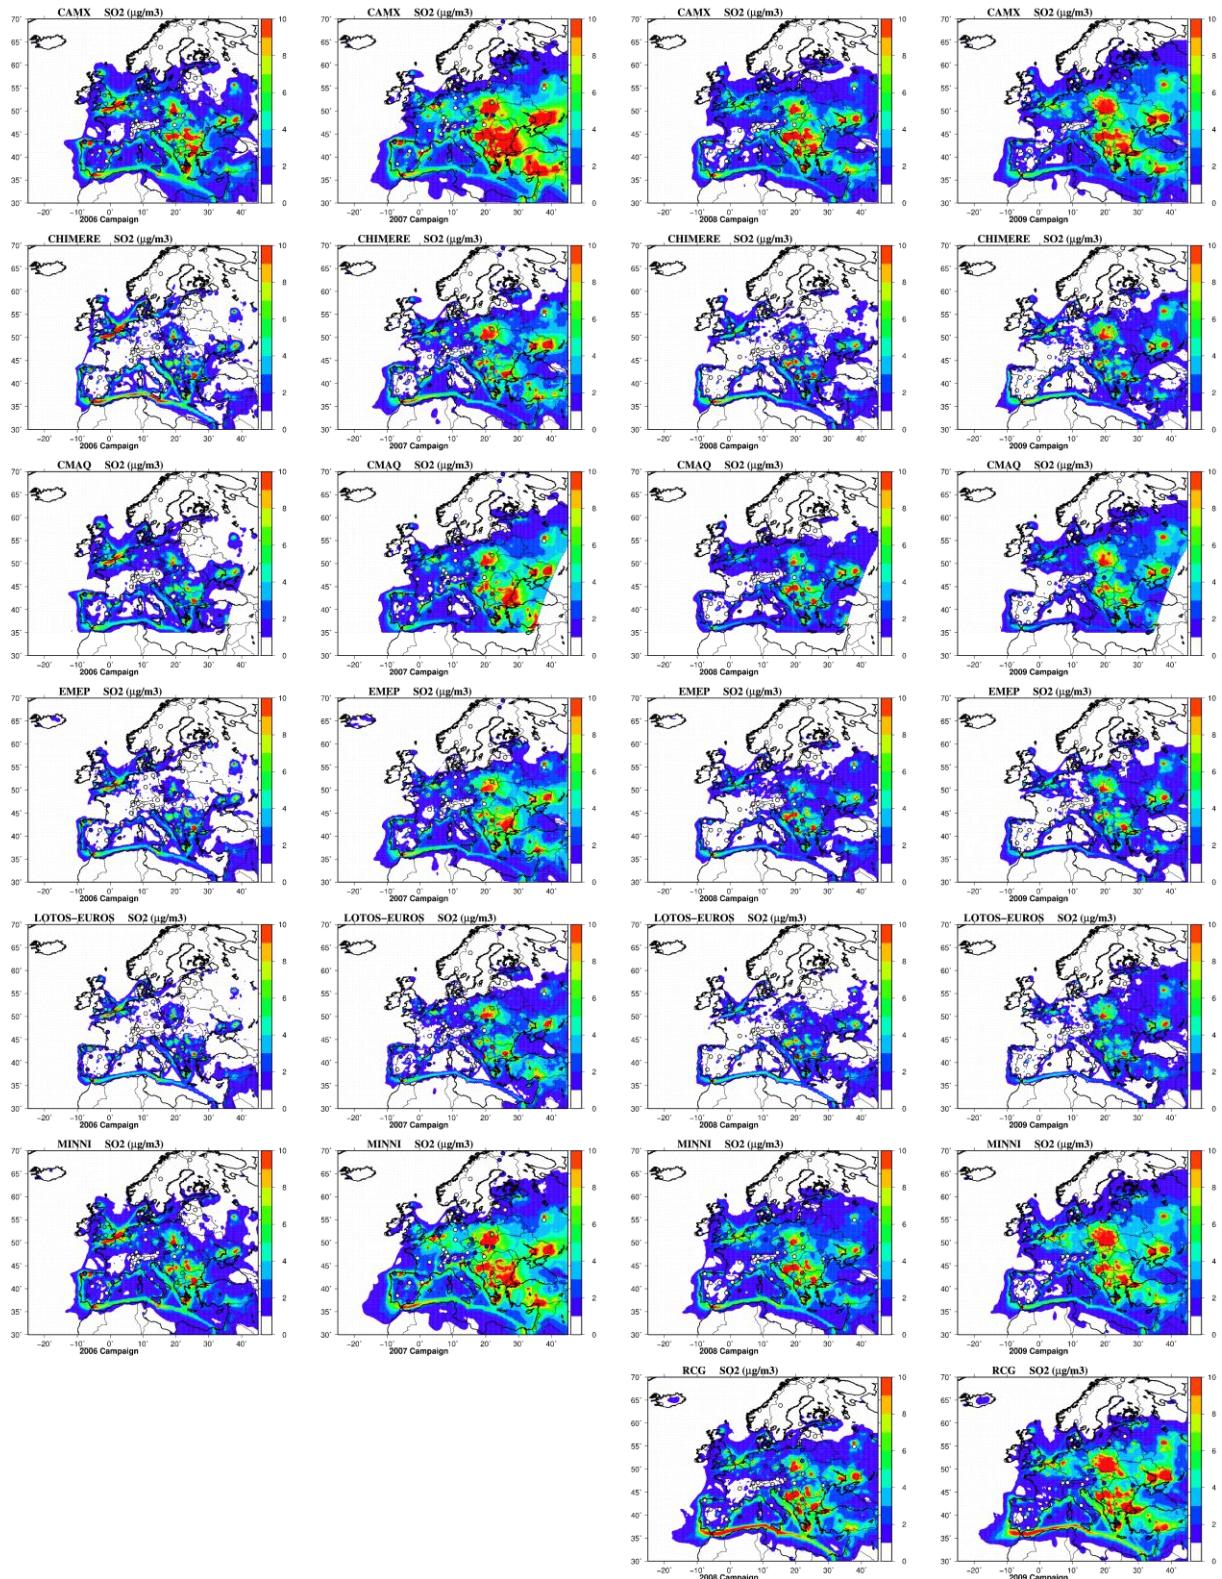

Left column: Average NO₂ concentrations ($\mu\text{g m}^{-3}$) of the “ensemble” (ENS) for the four campaigns with corresponding observations (coloured dots). **Right column:** coefficient of variation of models (no unit) constituting the ensemble with corresponding normalized root mean square errors of the “ensemble” (coloured dots).

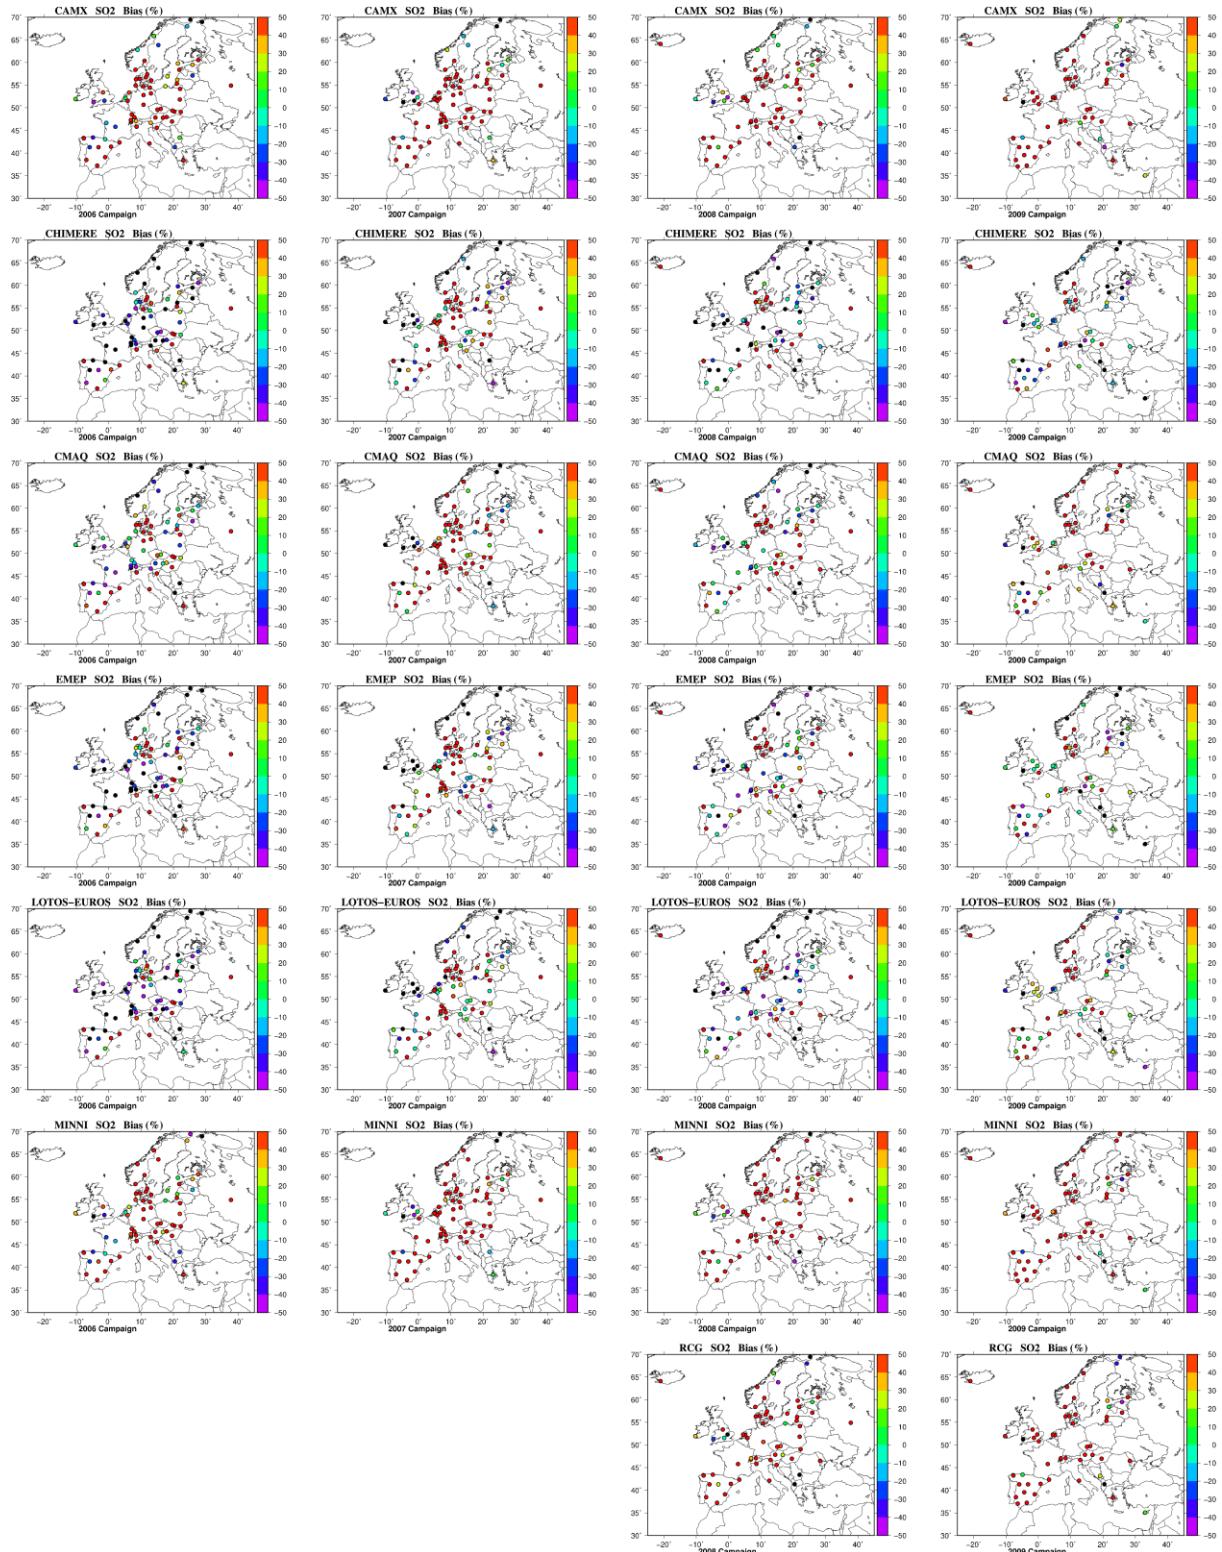

S4 : Supplementary material for Individual model performances on Sulphur Dioxide concentrations

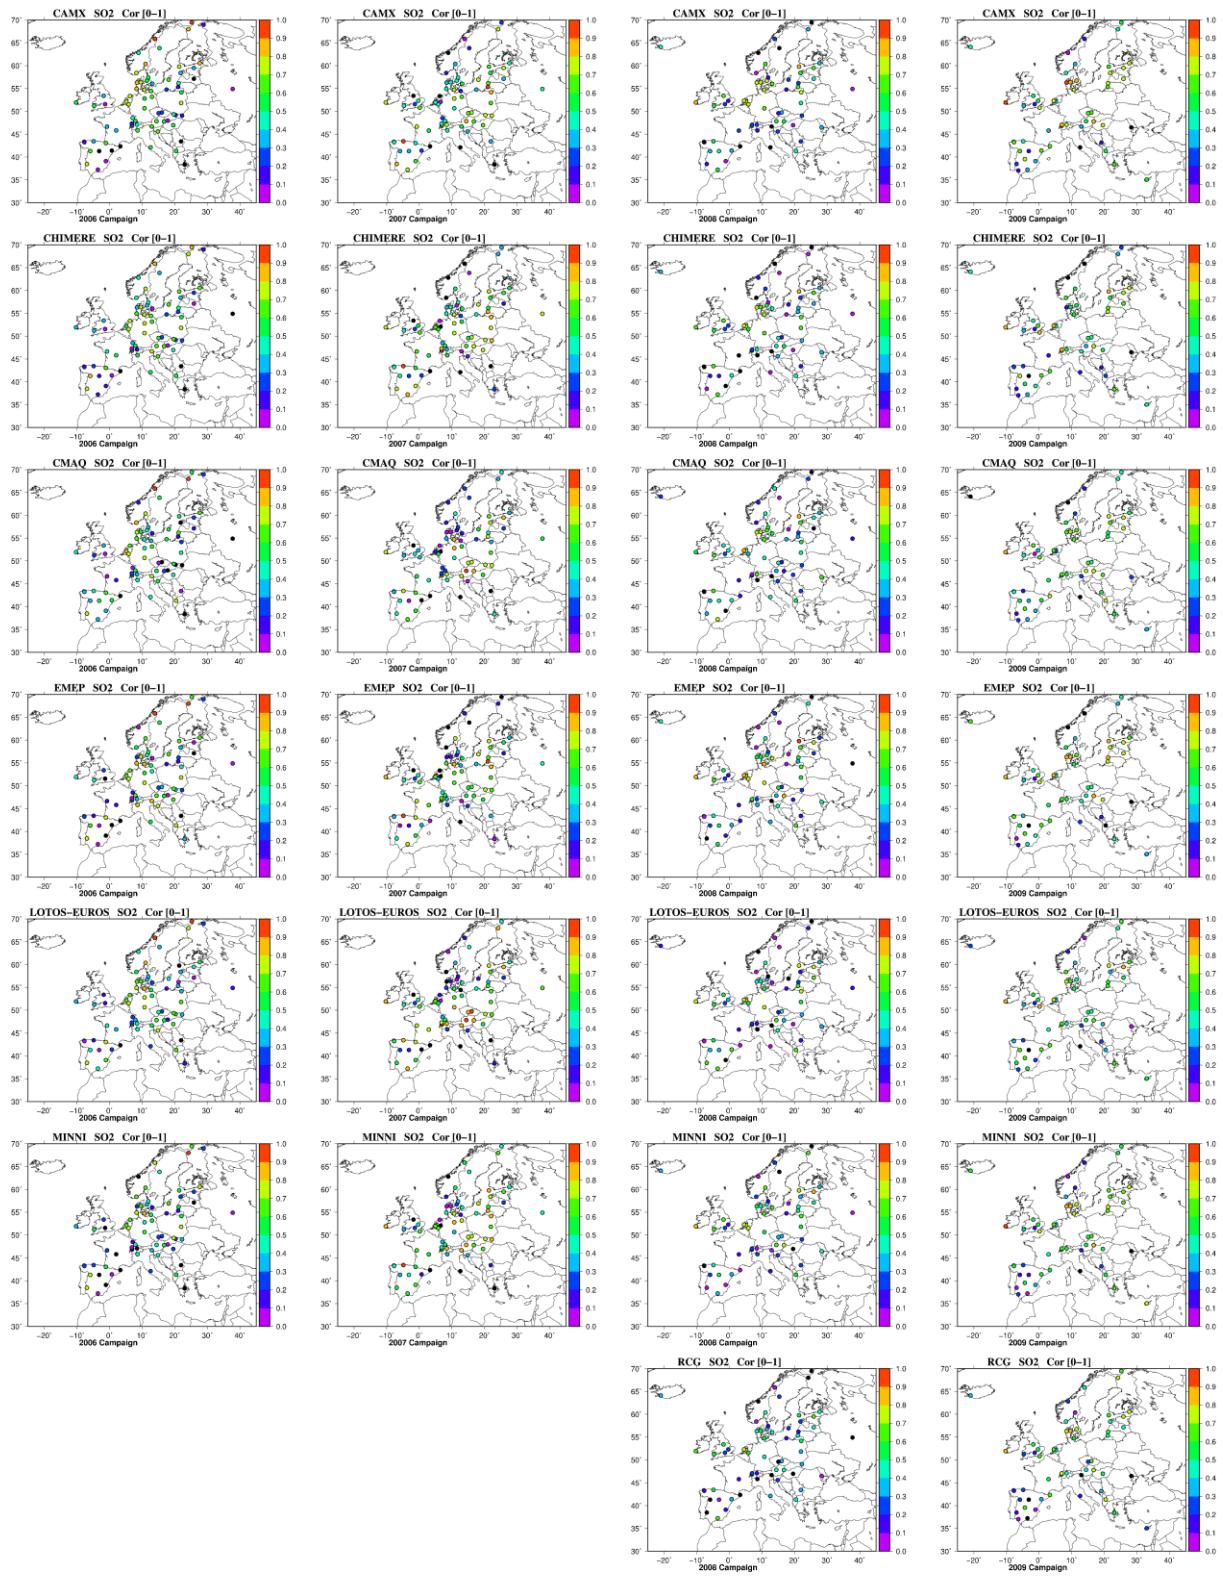

Average SO₂ concentrations for individual models for each campaign

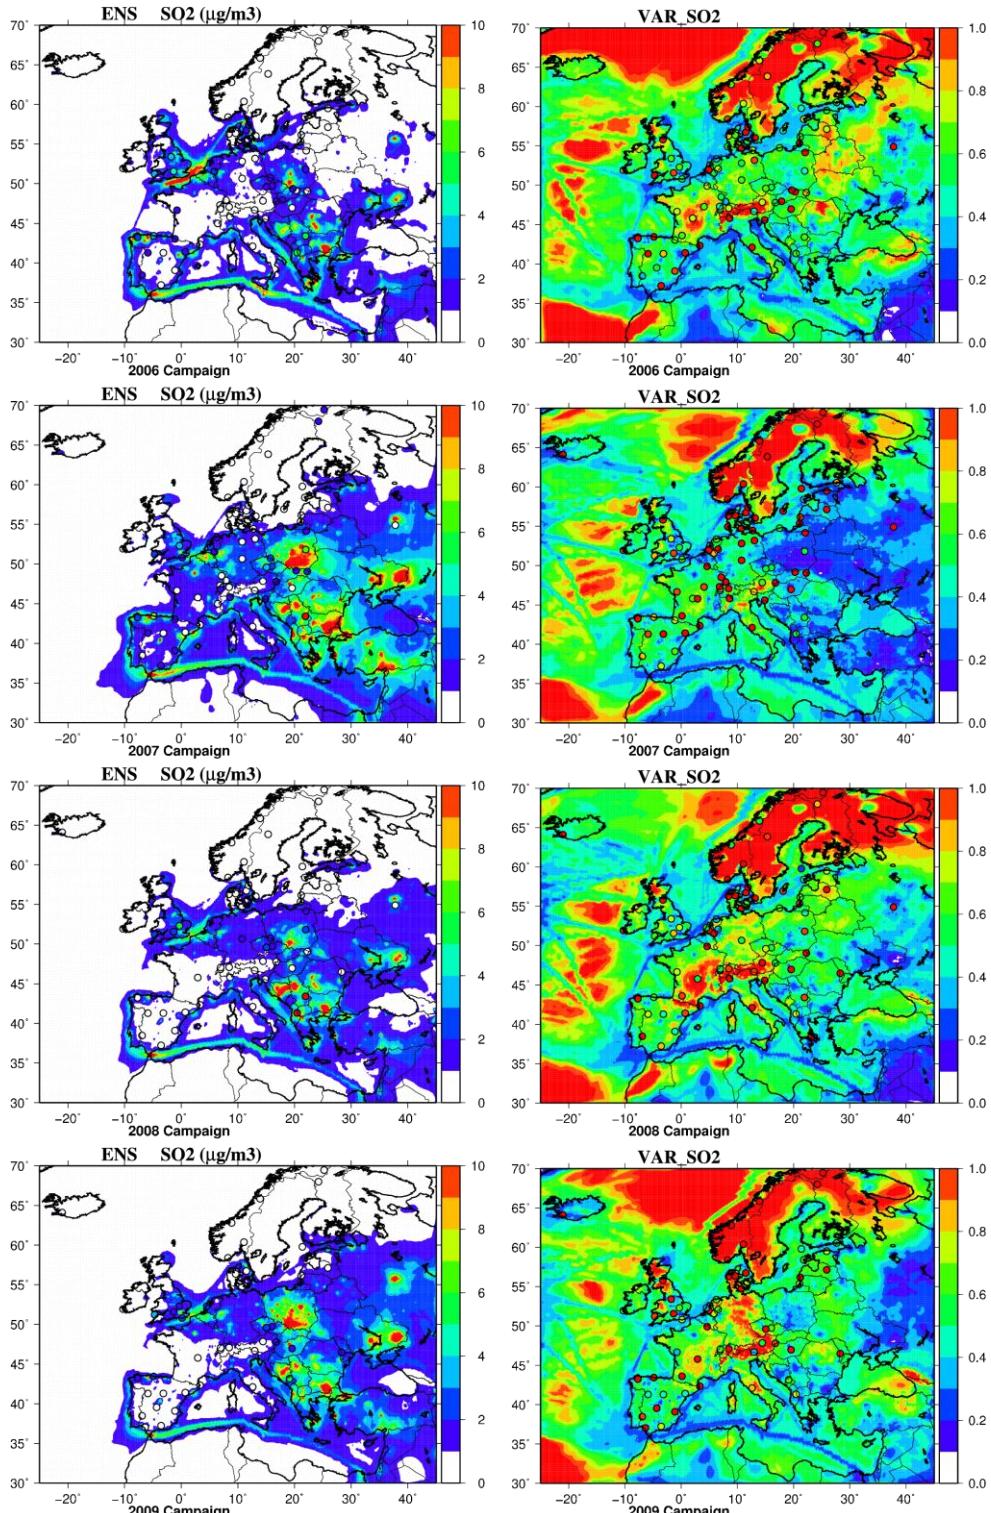

Averaged SO₂ bias for individual models for each campaign (black dots refer to value below the minimum color scale value)

SO₂ time correlations for individual models for each campaign (black dots refer to value below the minimum color scale value)

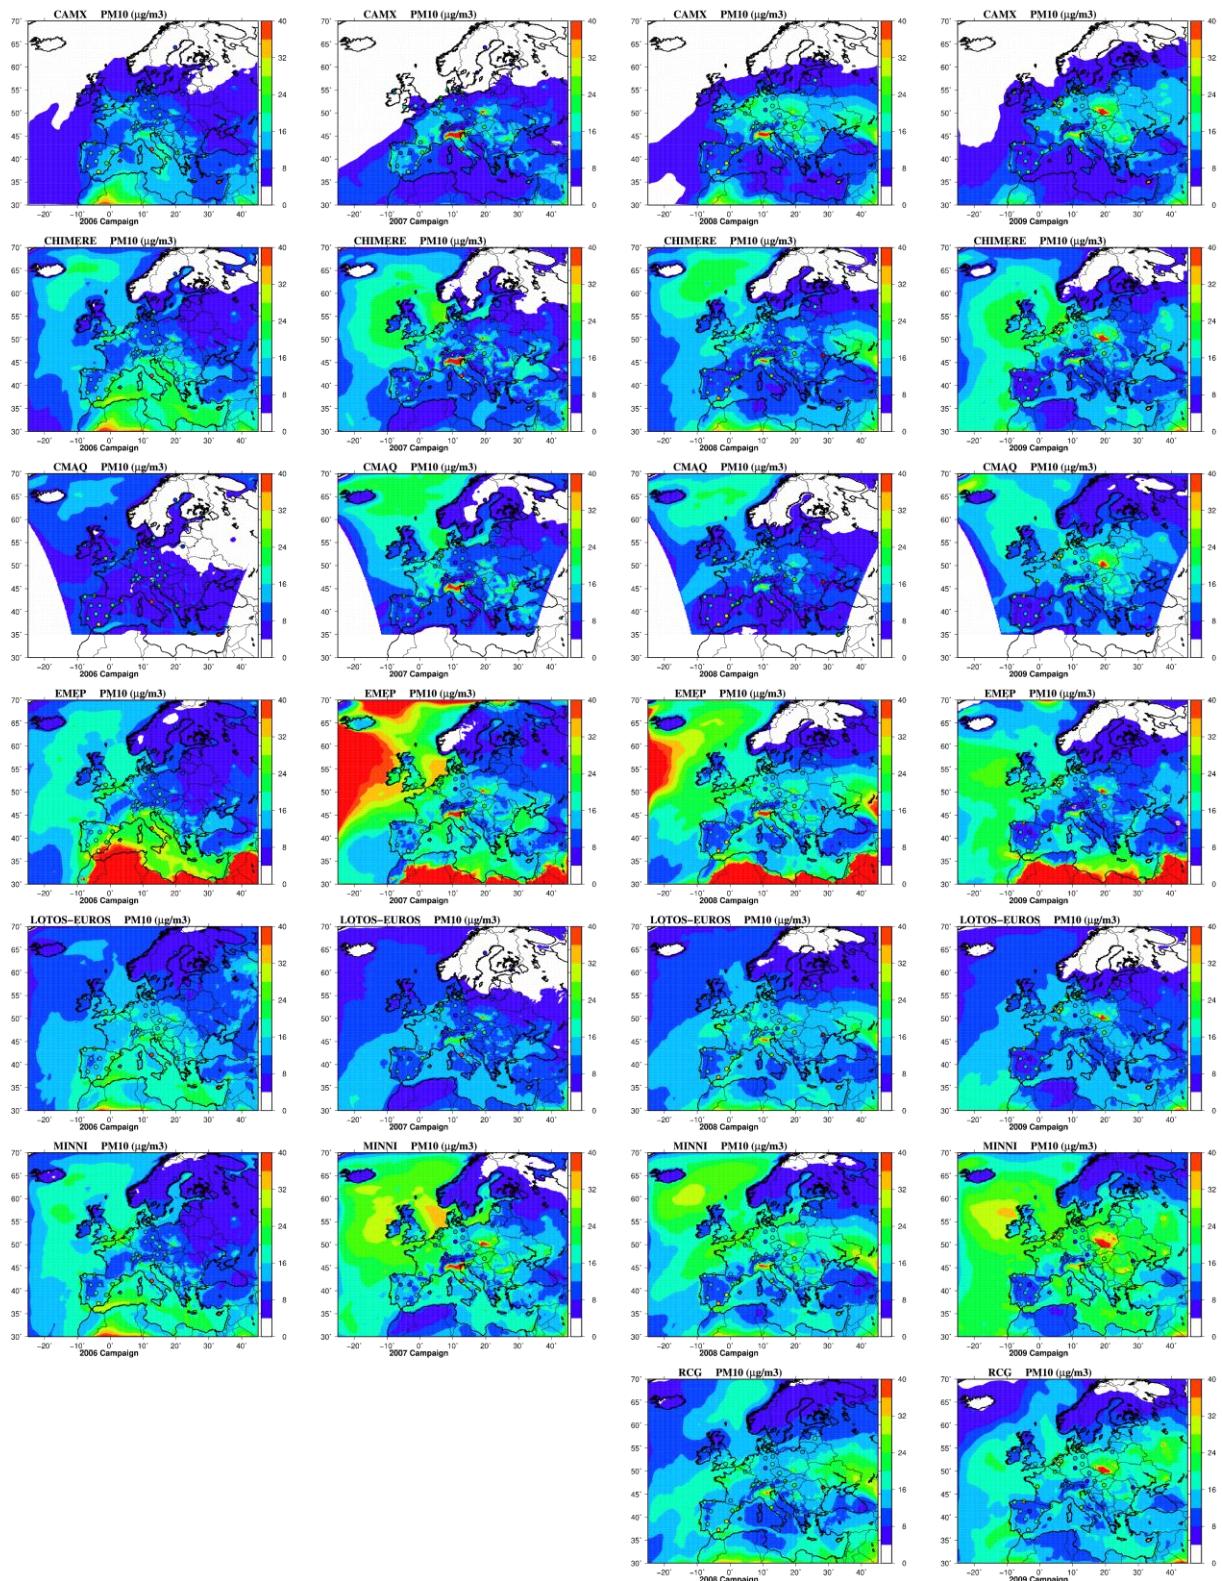

Left column: Average SO₂ concentrations ($\mu\text{g m}^{-3}$) of the “ensemble” (ENS) for the four campaigns with corresponding observations (coloured dots). **Right column:** coefficient of variation of models (no unit) constituting the ensemble with corresponding normalized root mean square errors of the “ensemble” (coloured dots).

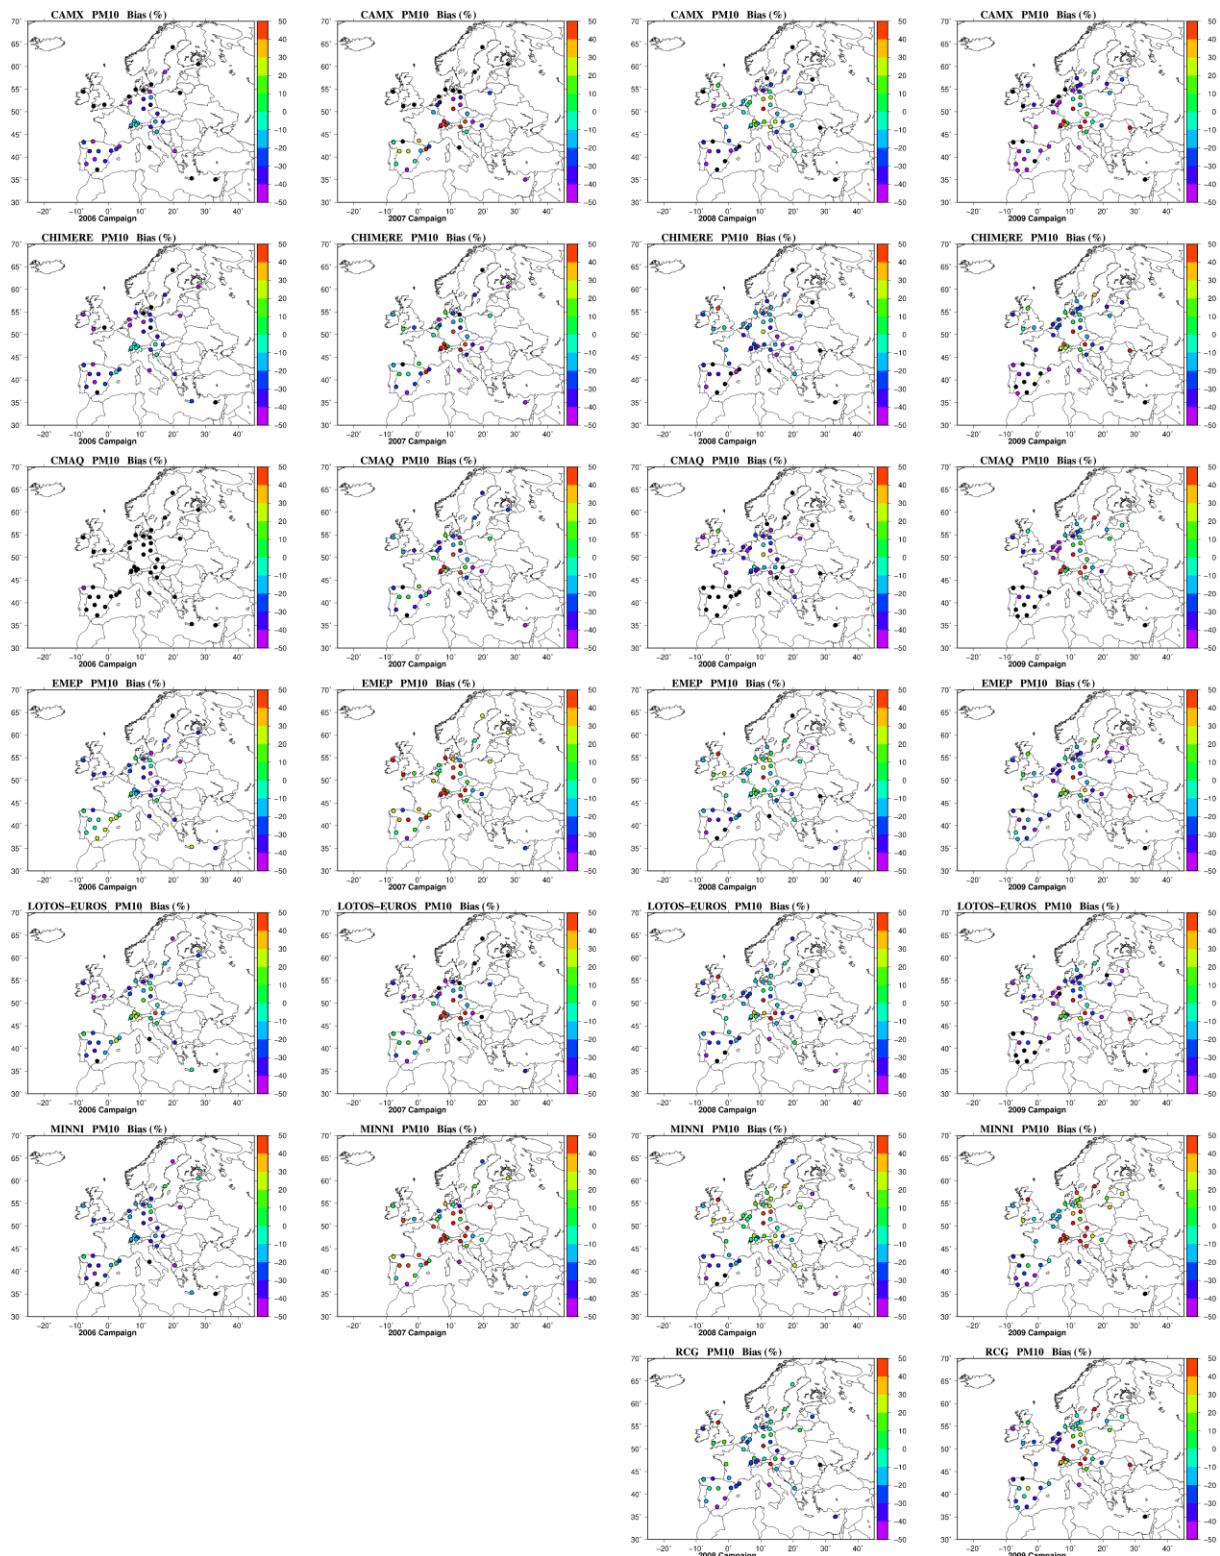

S5: Supplementary material for Individual model performances on PM₁₀ concentrations

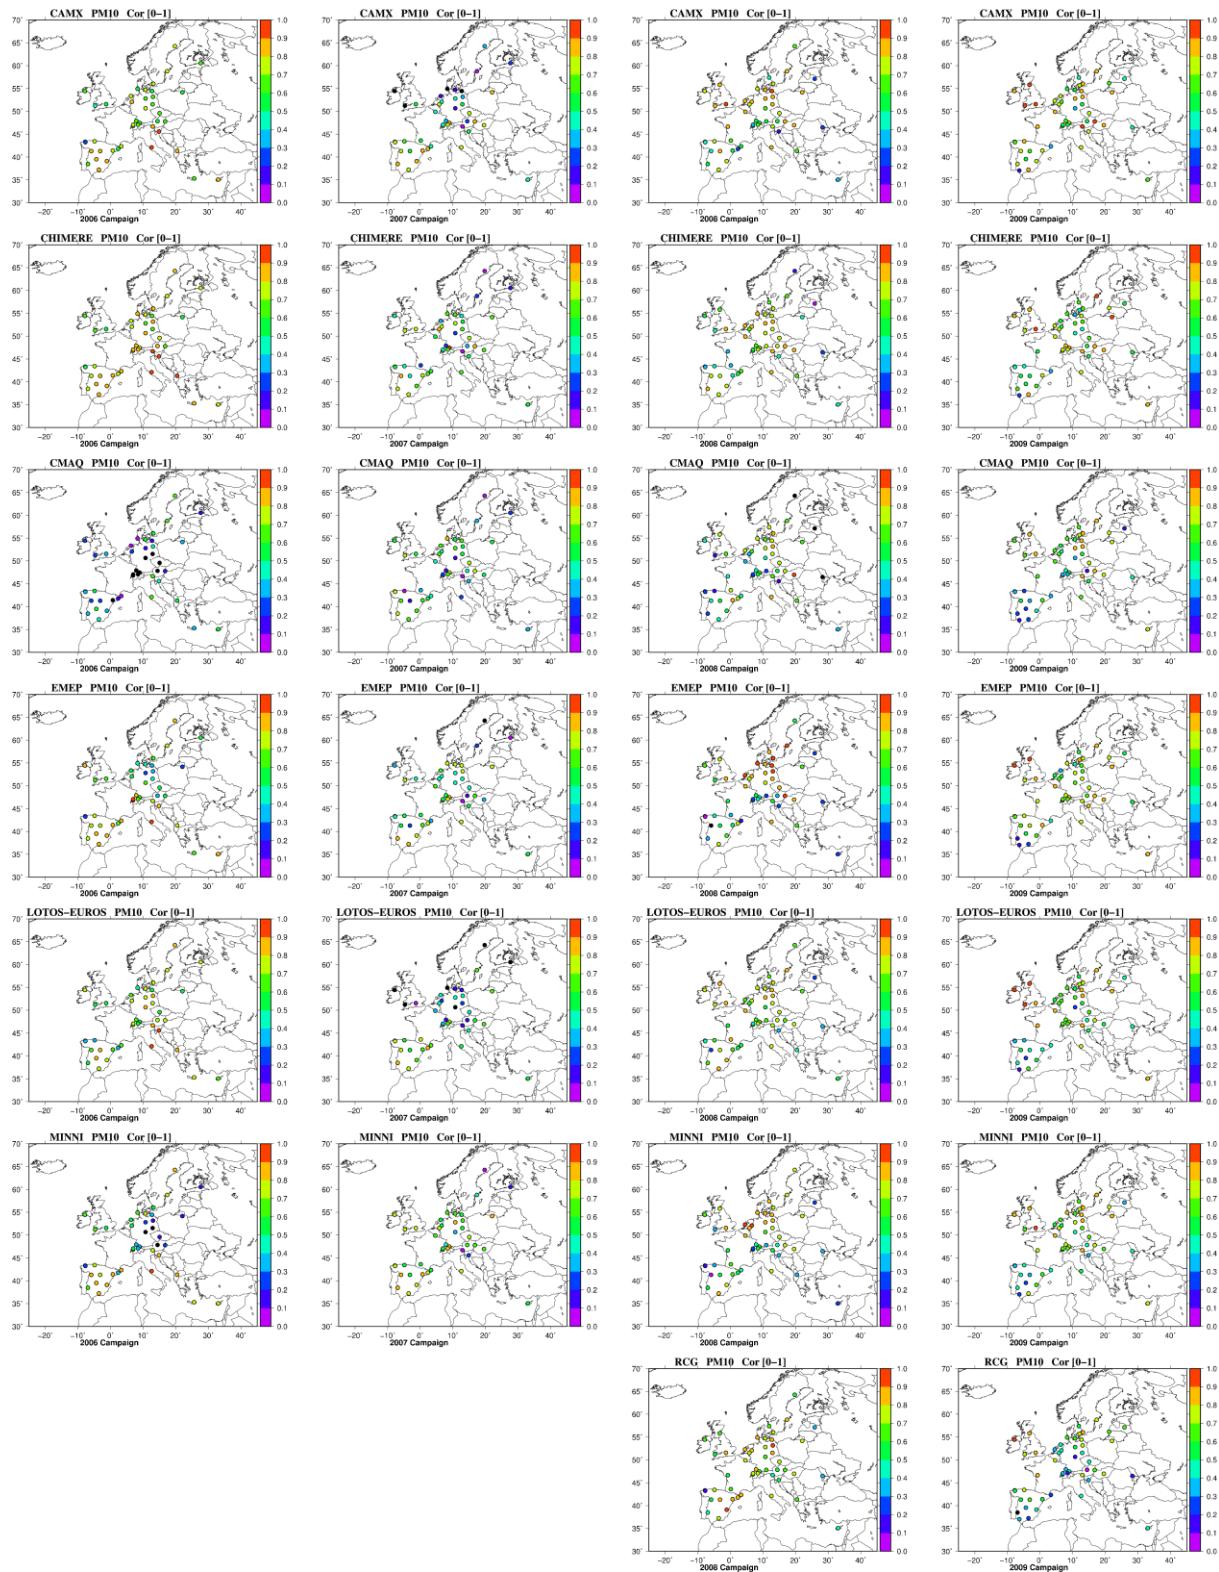

Average PM₁₀ concentrations for individual models for each campaign

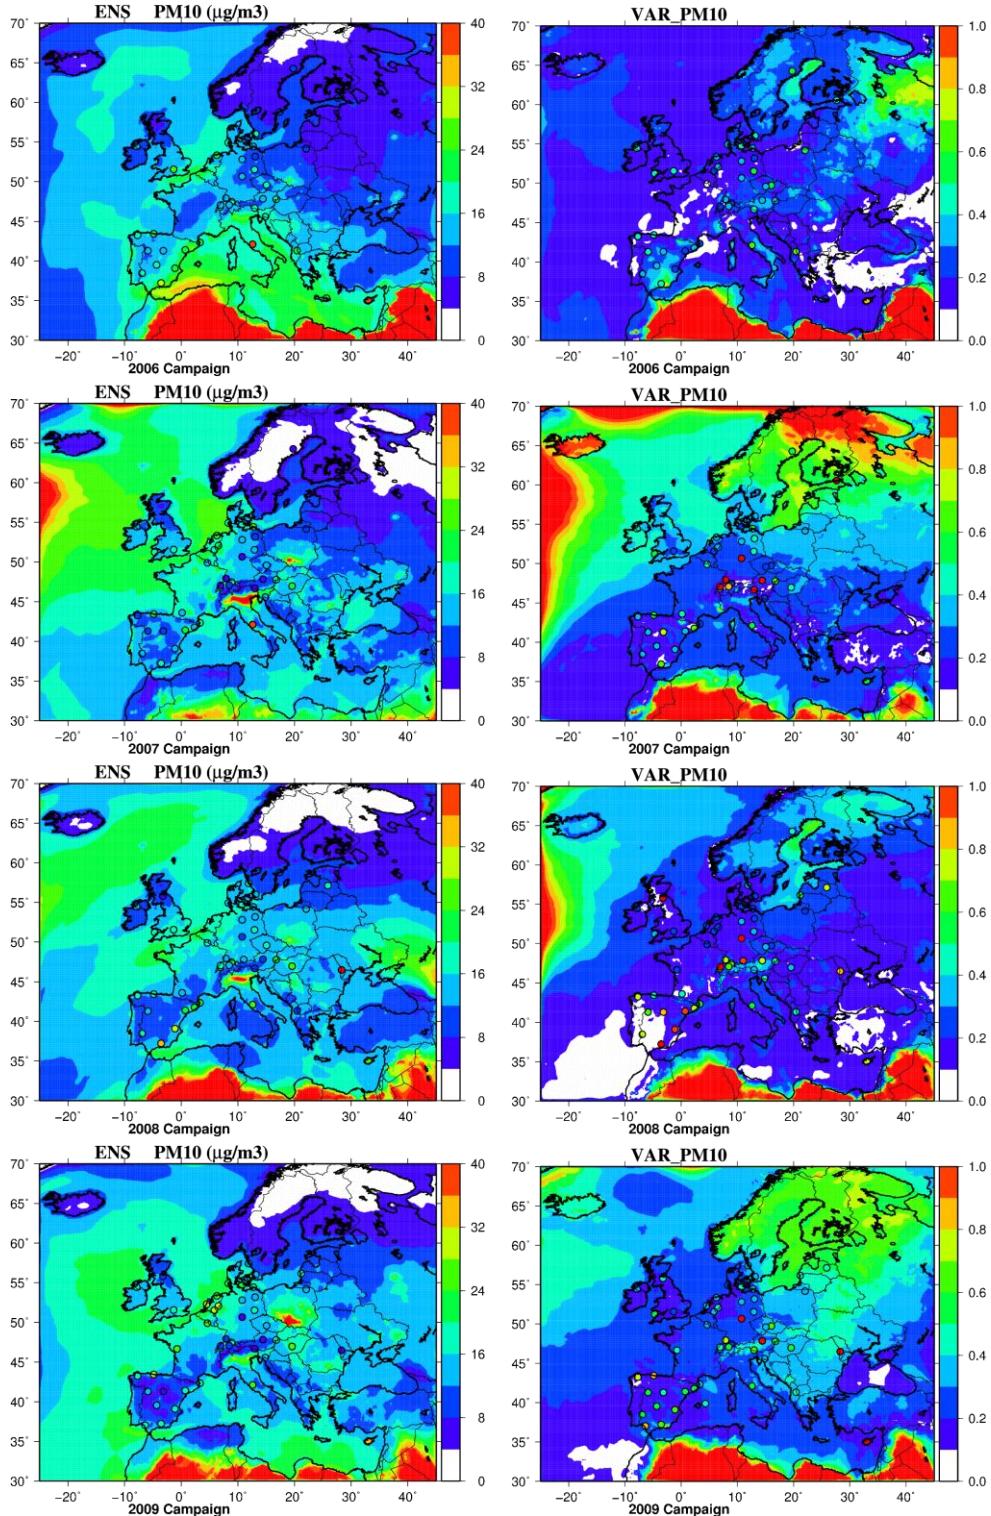

Averaged PM₁₀ bias for individual models for each campaign (black dots refer to value below the minimum color scale value)

PM₁₀ time correlations for individual models for each campaign (black dots refer to value below the minimum color scale value)

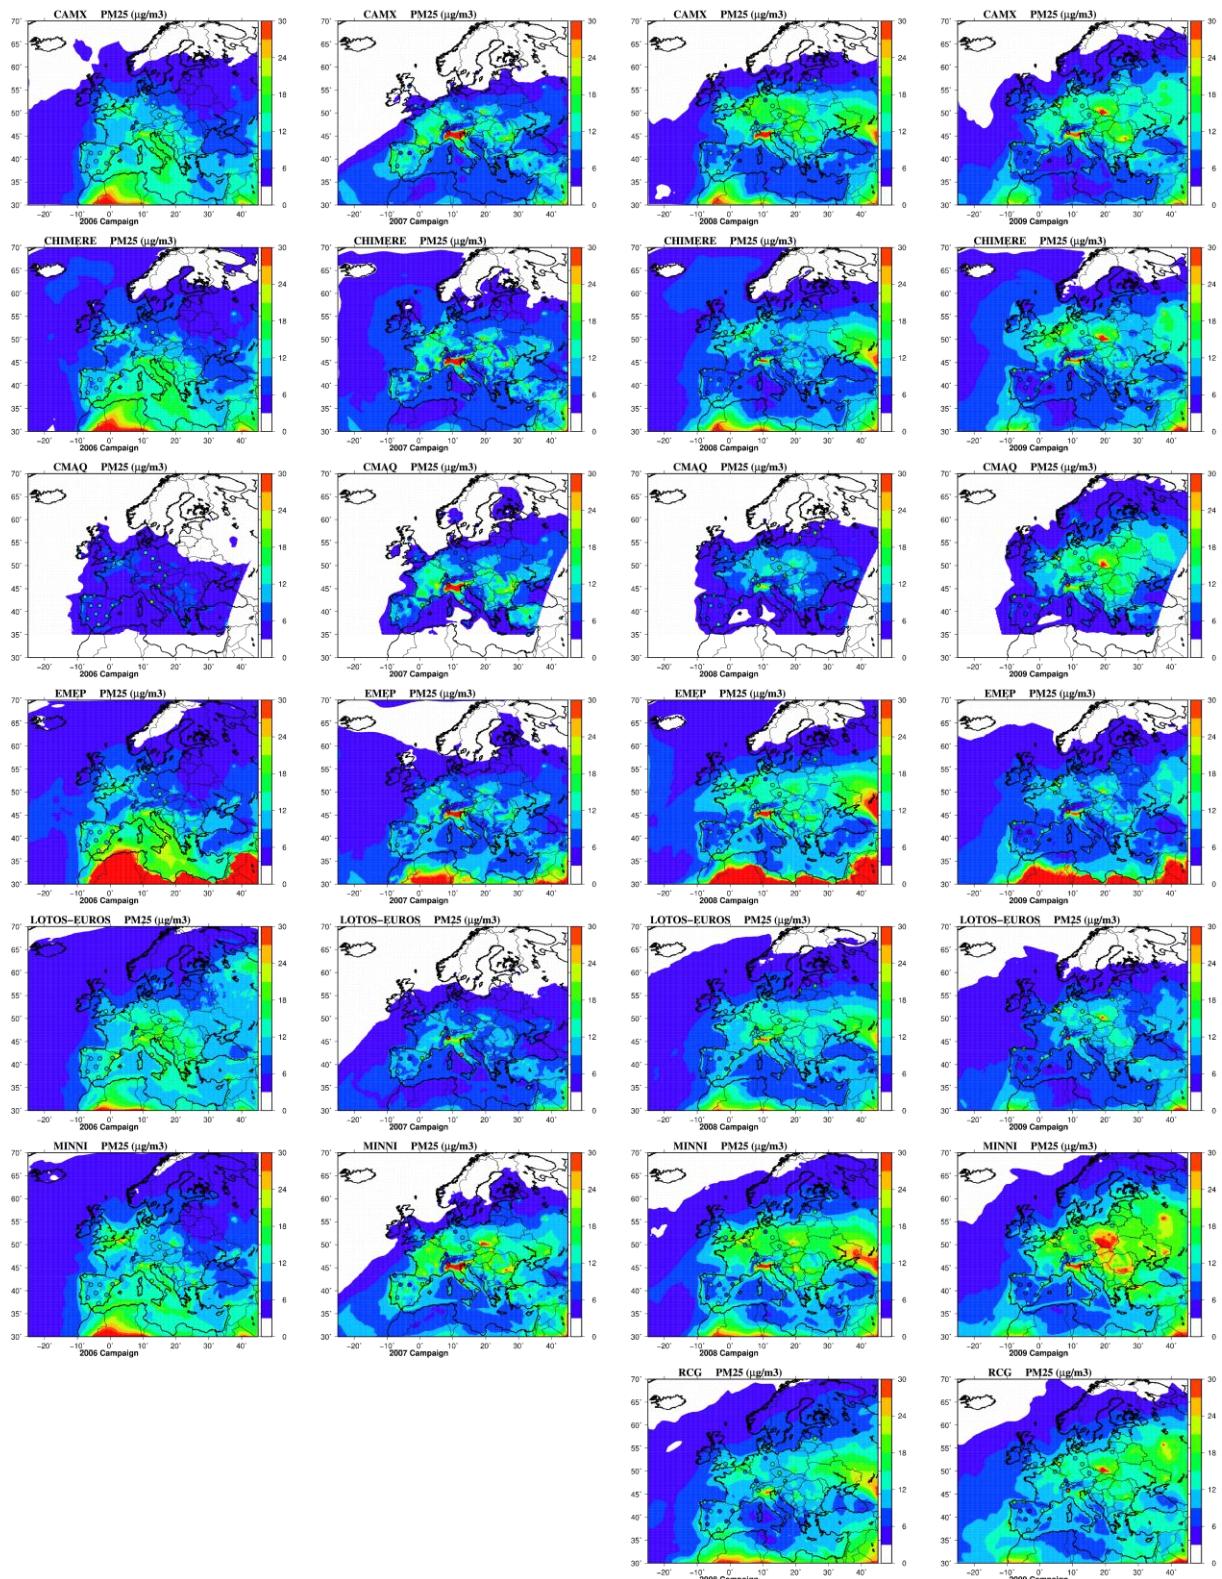

Left column: Average PM₁₀ concentrations ($\mu\text{g m}^{-3}$) of the “ensemble” (ENS) for the four campaigns with corresponding observations (coloured dots). **Right column:** coefficient of variation of models (no unit) constituting the ensemble with corresponding normalized root mean square errors of the “ensemble” (coloured dots).

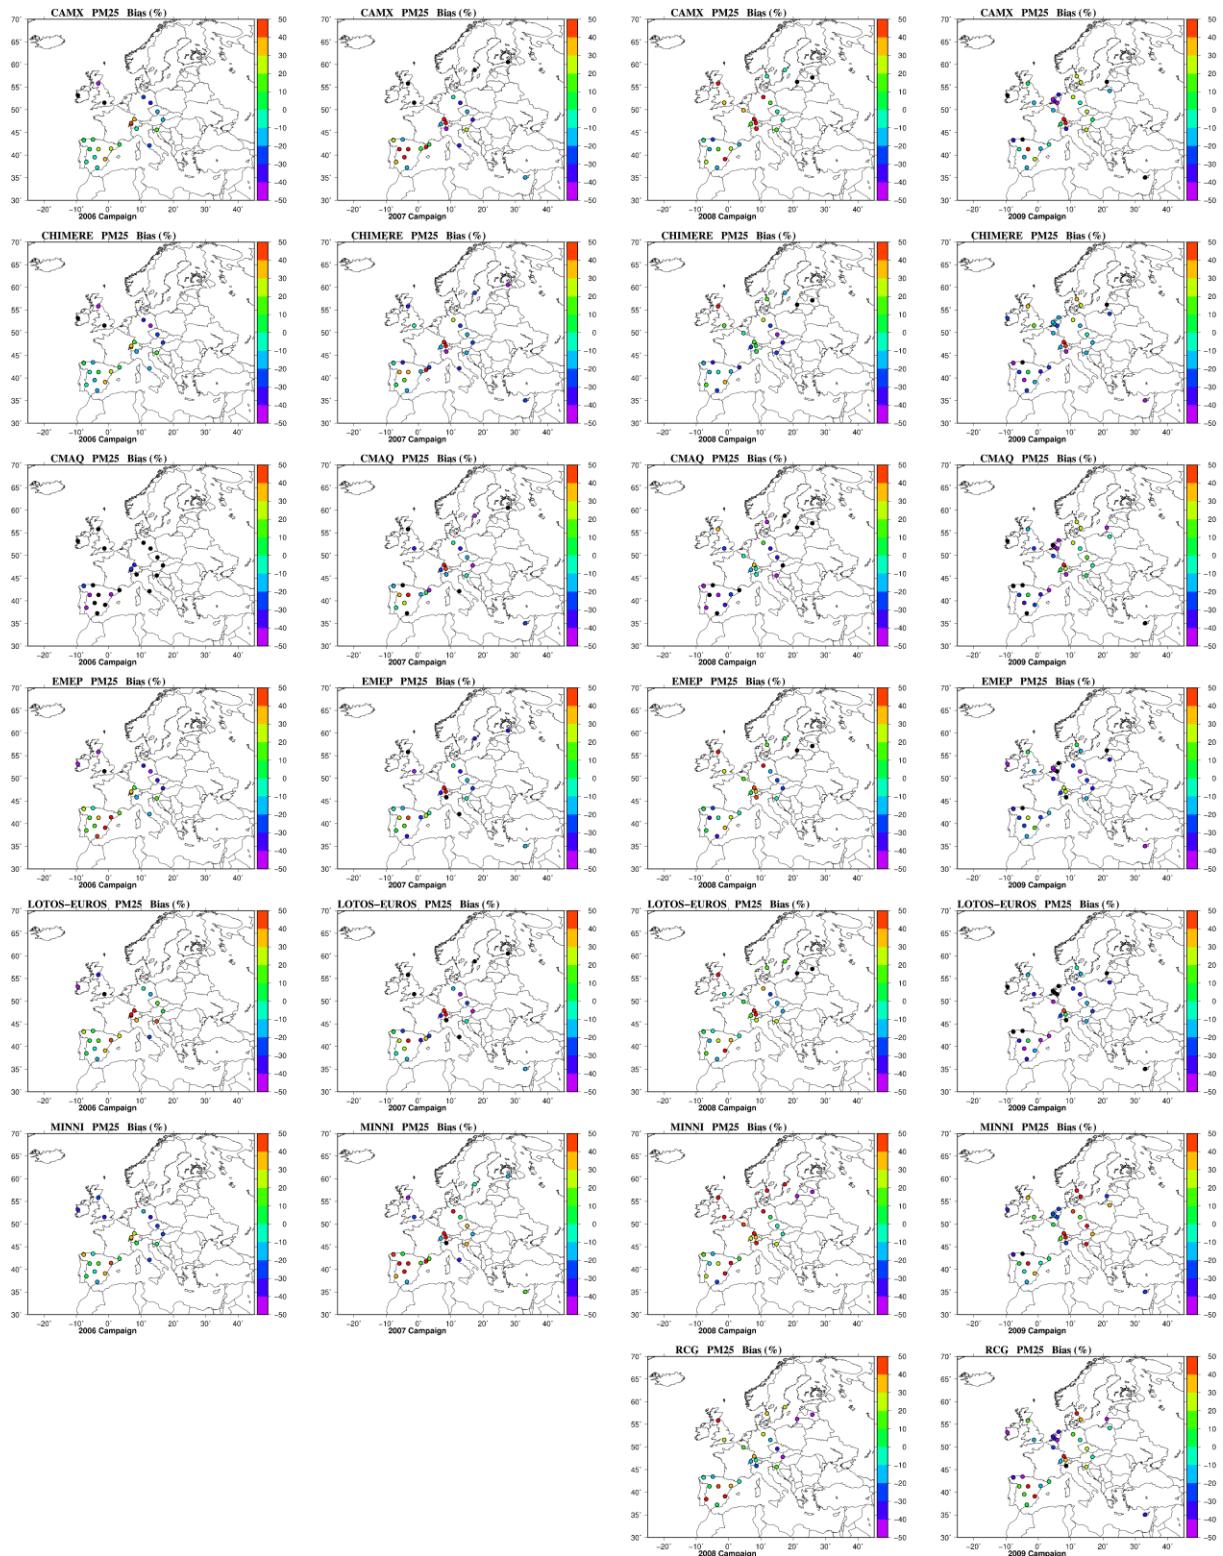

S6 : Supplementary material for Individual model performances on PM_{2.5} concentrations

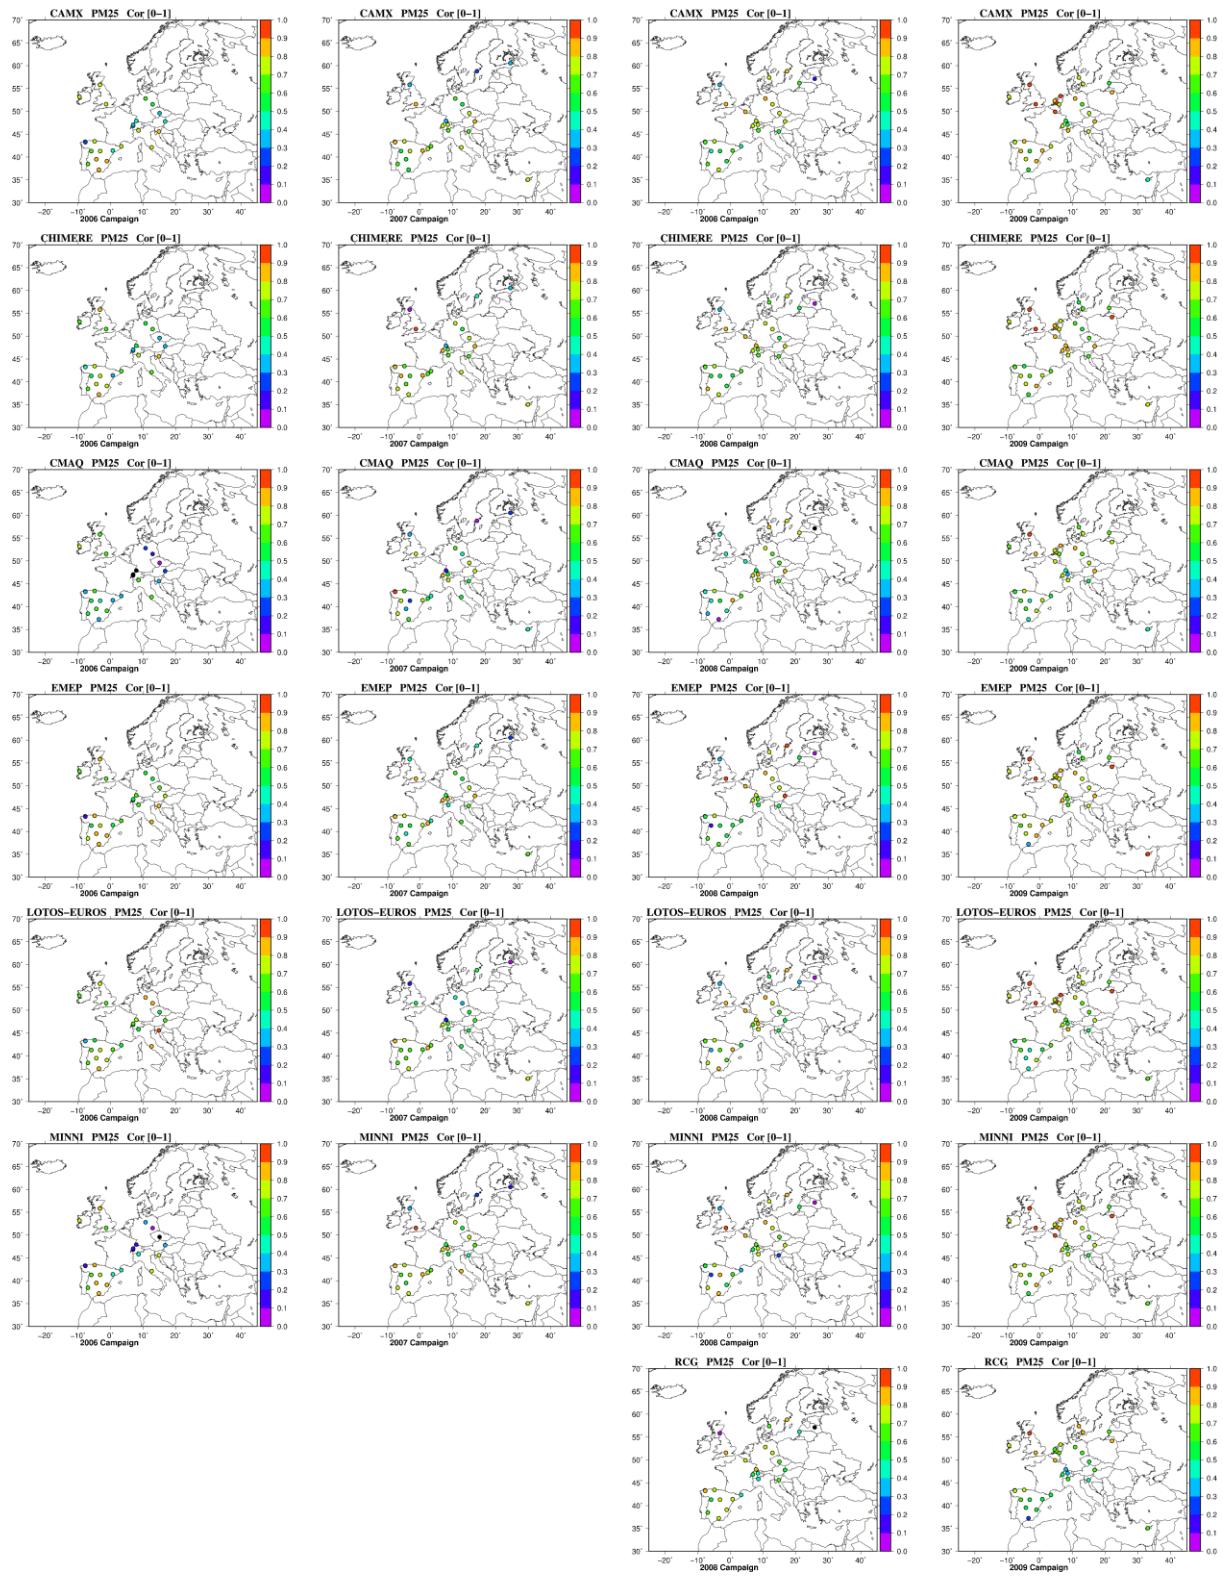

Average PM_{2.5} concentrations for individual models for each campaign

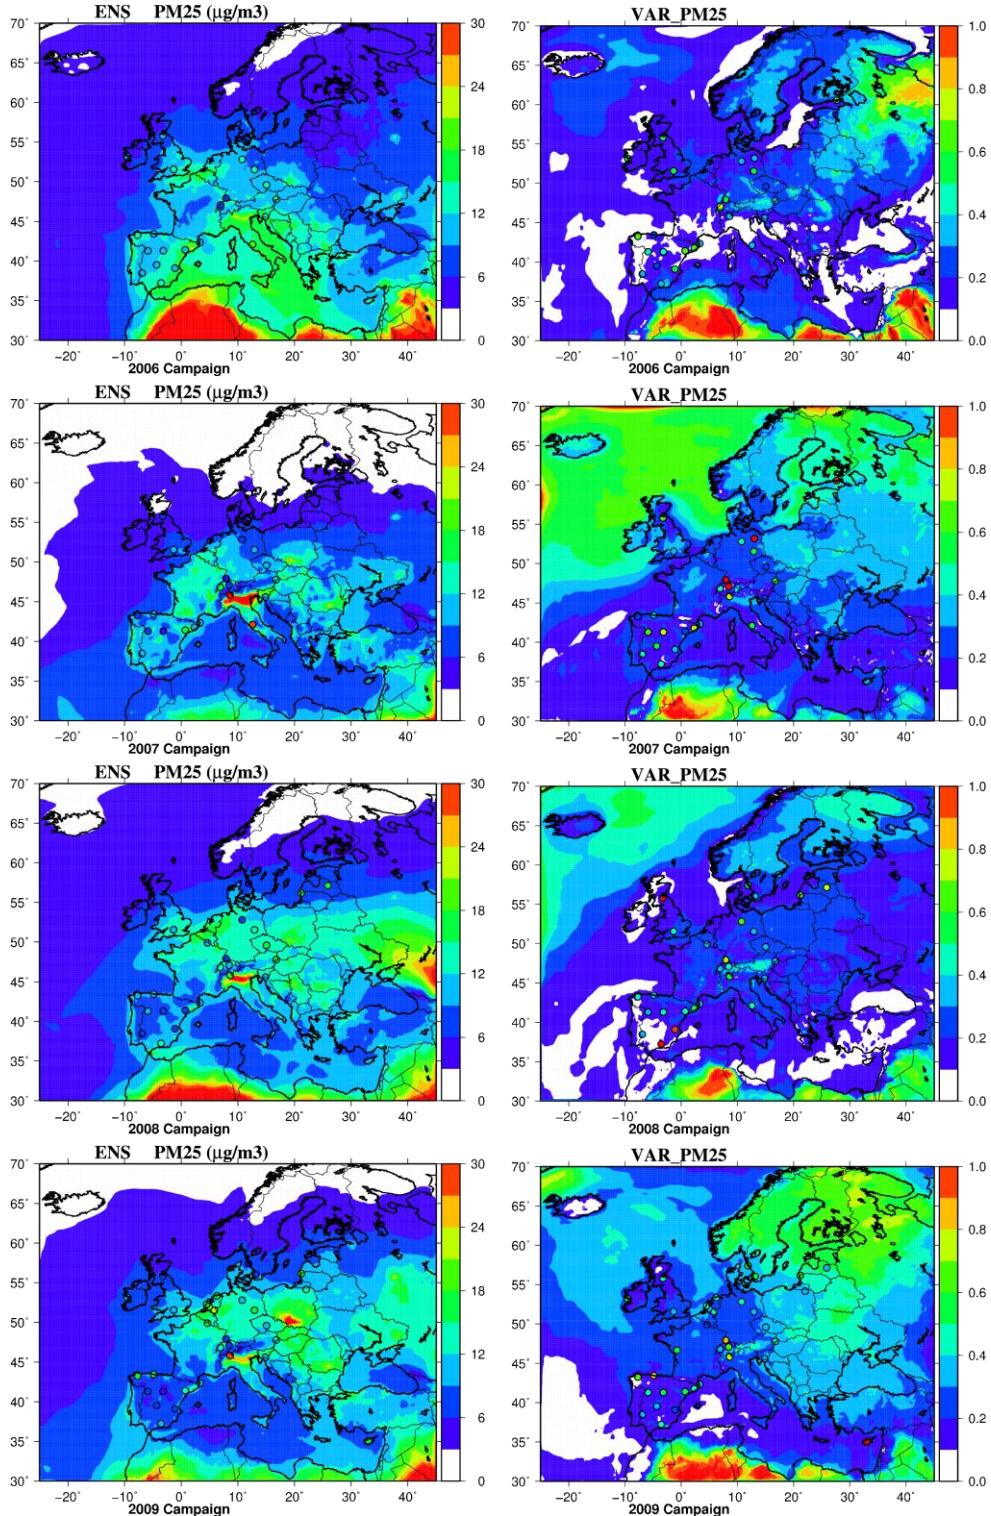

Averaged PM_{2.5} bias for individual models for each campaign (black dots refer to value below the minimum color scale value)

PM_{2.5} time correlations for individual models for each campaign (black dots refer to value below the minimum color scale value)

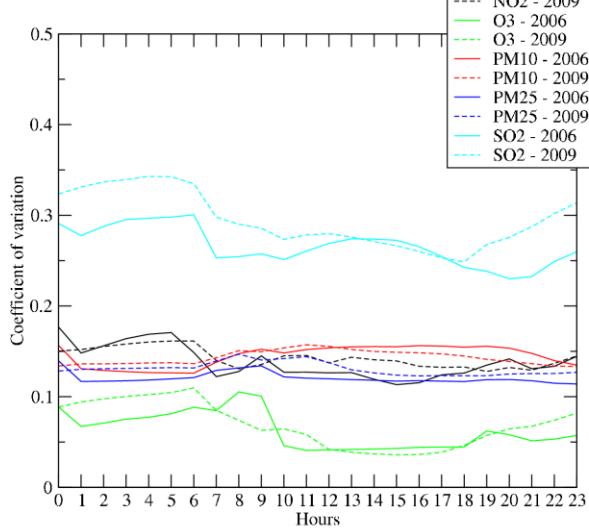

Left column: Average PM_{2.5} concentrations ($\mu\text{g m}^{-3}$) of the “ensemble” (ENS) for the four campaigns with corresponding observations (coloured dots). **Right column:** coefficient of variation of models (no unit) constituting the ensemble with corresponding normalized root mean square errors of the “ensemble” (coloured dots).

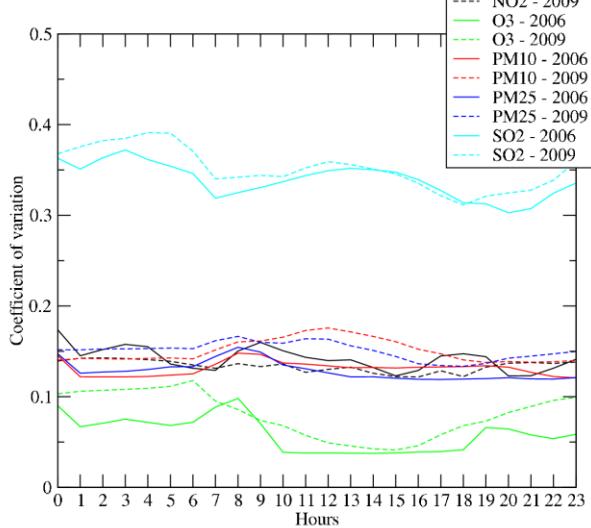

S7: Diurnal evolution of the coefficient of variation over different countries

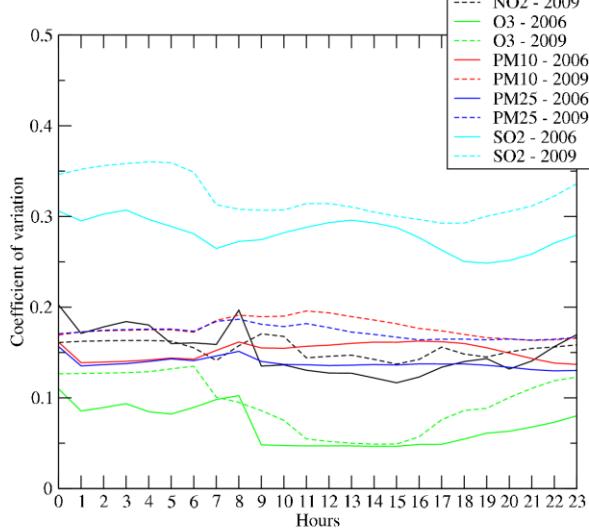

Mean diurnal evolution of the coefficient of variation aggregated over Spain

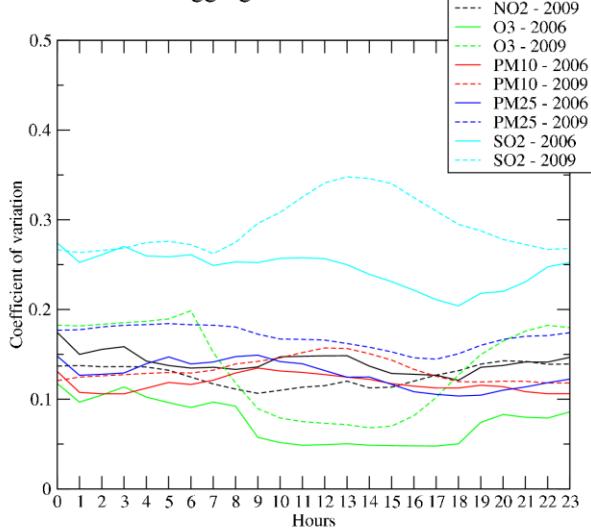

Mean diurnal evolution of the coefficient of variation aggregated over France

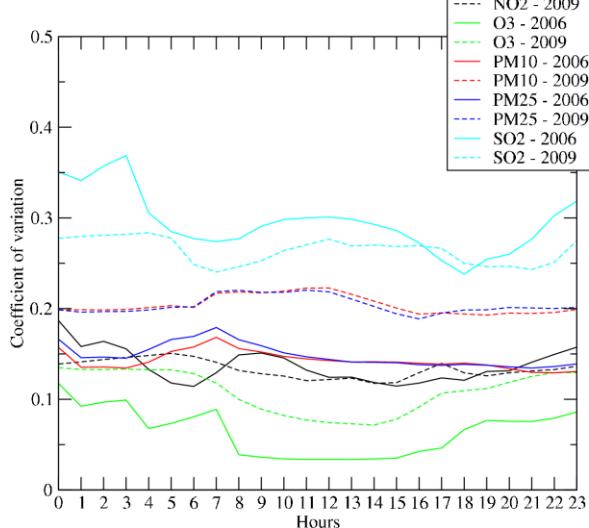

Mean diurnal evolution of the coefficient of variation aggregated over Italy

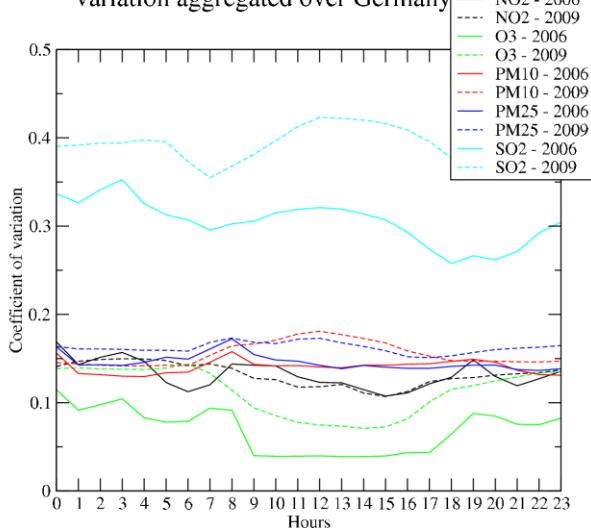

Mean diurnal evolution of the coefficient of variation aggregated over Holland

Mean diurnal evolution of the coefficient of variation aggregated over Poland

Mean diurnal evolution of the coefficient of variation aggregated over Germany

S8: Description of background sites and annual PM2.5 emissions for the residential sector
