

Figure S6: Longitude pressure cross-section of changes in net ozone production (ppt day^{-1}) due to enhanced NO_x with respect to the CTRL simulation, averaged for the monsoon season (June-September) and over the Indo-Gangatic plain-Tibetan Plateau region (25°N - 40°N) for (a) Ind38 (b) Ind73. The black line shows the tropopause while black hatched lines indicate 95% confidence level.
