Supplement of

Distinctions in source regions and formation mechanisms of secondary aerosol in Beijing from summer to winter

Jing Duan et al.

Correspondence to: Ru-Jin Huang (rujin.huang@ieecas.cn)

Table S1. Summary of mass concentrations of aerosol species, gaseous pollutants and meteorological parameters during entire study and different seasons. PM_1 chemical composition during clean days (C), M-polluted days (M) and H-polluted days (H) in different seasons are also shown.

| Species	Entire study	Late Summer			Autumn				Early Winter			
		Entire	C	M	Entire	C	M	H	Entire	C	M	H
Aerosol species (µg m^{-3})												
PM_1	44.7	21.6	15.6	46.9	43.3	9.3	54.2	110.5	64.3	8.1	43.5	109.7
OA	22.4	13.8	10.5	28.1	21.2	5.8	25.5	50.8	29.6	4.5	20.4	49.4
