The legend in Fig. 6e has been mislabeled. The gray color corresponds to “Missing” and the other colors should have corresponded to the same species as in Fig. 6f. The figure, which is also the key figure of the article, can be found below with the correct legend.

Figure 6. (a) Experimental total OH reactivity R_{exp} (1 h average) and calculated OH reactivity R_{OH} , (b) environmental conditions (air and surface soil temperatures, as well as surface soil water content), (c) Pyr / OH in the CRM reactor, (d) data availability from the different instrumentation/sources, (e) fraction of experimental total OH reactivity, and (f) fraction of calculated OH reactivity. The periods shaded in grey in (a) to (d) represent the periods investigated with SOSAA (see Sect. 3.4).
