1 **Table S1.** List of water-soluble species analyzed and limits of detection (LOD) in units of
 2 aqueous concentration. Concentrations of elements and ions were quantified using ICP-QQQ and
 3 IC, respectively.

6 **Figure S1.** Heights above ground (m) for HYSPLIT back-trajectories shown in Figure 2 for the
7 three high aerosol cases (MO7, MO12, and MO14)

8
9 **Figure S2.** Five-day air mass back-trajectories from HYSPLIT for the sample sets not included
10 in Figure 2: MO1, MO2, MO4, MO5, MO6, MO8, MO9, and MO10.

12 **Figure S3.** Daytime CALIPSO overpasses during sample set MO7.

 14 **Figure S4.** NAAPS model snapshots for the conditions at the stop time of MO8. The top plot is
 15 anthropogenic and biogenic fine aerosol (ABF) surface concentration ($\mu\text{g m}^{-3}$), while the bottom
 16 plot is biomass burning smoke surface concentration ($\mu\text{g m}^{-3}$).
