This study investigated the fraction of SOA to total OA and the fraction of OA to NR-PM. The average NR-PM concentration was also measured. The results are presented for different cities in Northern and Southern China.

- **Fraction of SOA to total OA**
- **Fraction of OA to NR-PM**
- **Average NR-PM concentration**

The graph shows the comparison of these fractions for Shijiazhuang, Lanzhou, Beijing, Hong Kong, Nanjing, and the study as a whole. The concentration is given in mass concentration (µg m$^{-3}$).
