In the paper “Characteristics of sub-10 nm particle emissions from in-use commercial aircraft observed at Narita International Airport” (published in Atmos. Chem. Phys., 21, 1085–1104, 2021), the unit of the particle number emission indices (EIs) is incorrectly printed as “kg per fuel” throughout the main text, which is due to an error during the typesetting process. The correct unit is “per kilogram of fuel” (denoted by “kg-fuel⁻¹” in Figs. 8–10 and Table S2). The numerical values of the particle number EIs are unchanged.
