In the research article on p. 7684, we, the authors, feel that the changes made in copy-editing do not convey what we mean to say. In copy-editing, the phrase “considerably low” was edited to “insufficiently low”:

“Notably, unlike the Constrained simulation, the best efficiency is infrequent (< 10%), specifically for the daytime mean BC concentrations from the Smog, Edgar, and C mip simulations, thereby indicating that the BC emission strengths of the respective emission database as input in the model are insufficiently low to simulate the BC distribution adequately over the IGP”

We mean to say that the BC emissions are too low to be able to simulate the distribution.
