

Supplement of

Fingerprints of the COVID-19 economic downturn and recovery on ozone anomalies at high-elevation sites in North America and western Europe

S1. Zugspitze data homogenization

Similarly to Cooper et al. (2020) and Cristofanelli et al. (2020), the Zugspitze data were homogenized to take into account the different O₃ measurement activities that were carried out during the years, i.e.: O₃ measurements carried out by the Fraunhofer Institute for Atmospheric Environment Research (IMK-IFU) at the summit of Mt. Zugspitze (ZUG, 2962 m a.s.l.) from 1978 to 2010, and the O₃ measurements from the German Federal Environmental Agency (UBA) at the Schneefernerhaus station (ZSF, 2669 m a.s.l.) from 2001. The time series at ZUG (2000–2010) and ZSF (2011–2021) were merged, taking into account the bias due to the lower elevation of ZSF with respect to ZUG. To homogenize the two time series, the simultaneous observations at ZUG and ZSF were compared from 2002 to 2010, and the average differences between monthly nighttime (00–04 UTC) data were calculated, resulting in a mean bias of 1.32 ppb. This average bias was then subtracted from the ZUG time series, to obtain a unique consistent time series, and to avoid artificial discontinuities due to the different sampling locations. The merged time series obtained the ZSF acronym in the paper, for continuity with the measurements currently carried out at the site.

Table S1: Decadal ozone trends (50th percentile) for the 41 high-elevation sites used in this study, with different periods considered for trend calculation (i.e., 2000–2019, 2000–2020, and 2000–2021, or shorter periods when data back to 2000 were not available). For station acronyms please refer to Table 1.

Site	Full record, ending in 2019 (ppb/decade)	Full record, ending in 2020 (ppb/decade)	Full record, ending in 2021 (ppb/decade)

Table S2: CO₂ emissions variations (expressed in %) from Carbon Monitor (Liu et al., 2020), for EU27 states and United Kingdom emissions, for the different combinations of years 2019, 2020, and 2021, and with focus on MAM and JJA for each comparison. The percentage represents the contribution of each sector to the total change (i.e., “All sectors”), while the percentage in parentheses indicates the sector change in the selected year with respect to the comparison year.

EU	2020 vs 2019			2021 vs 2019			2021 vs 2020		
	All	MAM	JJA	All	MAM	JJA	All	MAM	JJA
All sectors	-10.9%	-21.8%	-10.4%	-2.7%	-2.9%	-6.3%	+9.2%	+24.2%	+4.5%
Power	-3.8% (-13.5%)	-6.4% (-24.7%)	-2.8% (-9.4%)	-1.3% (-4.6%)	-1.7% (-6.3%)	-2.5% (-8.4%)	+2.8% (10.2%)	+6.1% (24.3%)	+0.3% (1.1%)
Industry	-1.5% (-7.7%)	-4.1% (-20.6%)	-1.6% (-7.7%)	+0.3% (1.4%)	+0.1% (0.3%)	+0.2% (1.2%)	+2.0% (9.8%)	+5.4% (26.4%)	+2.1% (9.6%)
Ground transport	-1.5% (-5.6%)	-6.1% (-22.7%)	-0.5% (-1.7%)	+0.2% (0.6%)	+0.3% (1.2%)	-0.5% (-1.6%)	+1.9% (6.6%)	+8.3% (30.9%)	+0.0% (0.0%)
Residential	-0.4% (-2.0%)	-0.6% (-2.8%)	+0.6% (6.4%)	+1.1% (6.0%)	+2.6% (12.6%)	+0.3% (3.2%)	+1.7% (8.1%)	+4.0% (15.9%)	-0.3% (-3.0%)
Domestic aviation	-0.2% (-48.0%)	-0.4% (-75.0%)	-0.3% (-50.7%)	-0.2% (-31.8%)	-0.3% (-54.7%)	-0.1% (-16.1%)	+0.1% (31.1%)	+0.1% (81.0%)	+0.2% (70.2%)
International aviation	-3.4% (-58.8%)	-4.2% (-72.5%)	-5.6% (-69.7%)	-2.8% (-48.3%)	-4.0% (-68.9%)	-3.7% (-45.5%)	+0.7% (25.5%)	+0.3% (12.8%)	+2.2% (79.7%)

Table S3: CO₂ emissions variations (expressed in %) from Carbon Monitor (Liu et al., 2020), for United States of America emissions, for the different combinations of years 2019, 2020, and 2021, and with focus on MAM and JJA for each comparison. The percentage represents the contribution of each sector to the total change (i.e., “All sectors”), while the percentage in parentheses indicates the sector change in the selected year with respect to the comparison year.

US Sector	2020 vs 2019			2021 vs 2019			2021 vs 2020		
	All	MAM	JJA	All	MAM	JJA	All	MAM	JJA
All sectors	-10.1%	-17.2%	-8.7%	-4.5%	-5.8%	-0.3%	+6.2%	+13.8%	+9.2%
Power	-3.3% (-10.6%)	-5.3% (-18.5%)	-1.6% (-4.4%)	-1.4% (-4.4%)	-2.9% (-10.2%)	+1.3% (3.5%)	+2.2% (6.9%)	+2.9% (10.3%)	+3.2% (8.2%)
Industry	-0.9% (-4.6%)	-1.7% (-8.4%)	-1.3% (-6.8%)	-0.4% (-2.3%)	-0.3% (-1.6%)	-0.1% (-0.3%)	+0.5% (2.5%)	+1.7% (7.5%)	+1.4% (6.9%)
Ground transport	-3.1% (-9.6%)	-6.8% (-20.0%)	-3.1% (-9.4%)	-1.0% (-3.2%)	-0.7% (-2.1%)	-0.7% (-2.0%)	+2.3% (7.1%)	+7.4% (22.4%)	+2.7% (8.1%)
Residential	-1.0% (-8.1%)	-1.0% (-8.0%)	-0.2% (-4.5%)	-0.8% (-6.8%)	-0.9% (-7.0%)	-0.2% (-3.2%)	+0.2% (1.4%)	+0.1% (1.0%)	+0.1% (1.4%)
Domestic aviation	-1.0% (-30.4%)	-1.6% (-43.6%)	-1.4% (-39.0%)	-0.3% (-8.5%)	-0.4% (-11.9%)	-0.1% (-2.4%)	+0.8% (31.3%)	+1.4% (56.3%)	+1.4% (59.8%)

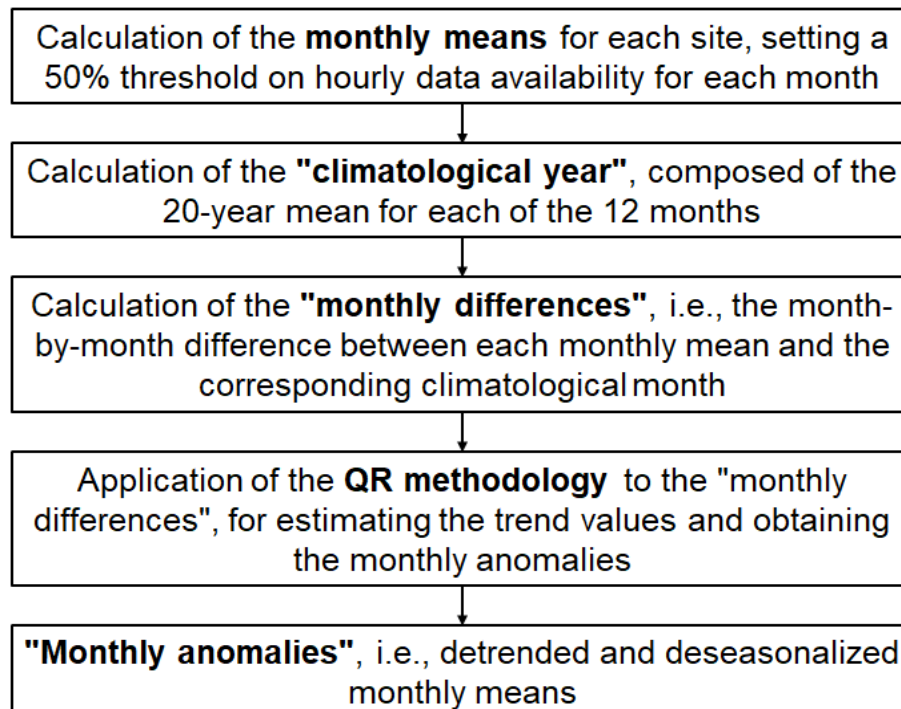

Figure S1. Flowchart indicating the steps followed for the calculation of the monthly O₃ anomalies, as explained in Sect. 2.1.2.

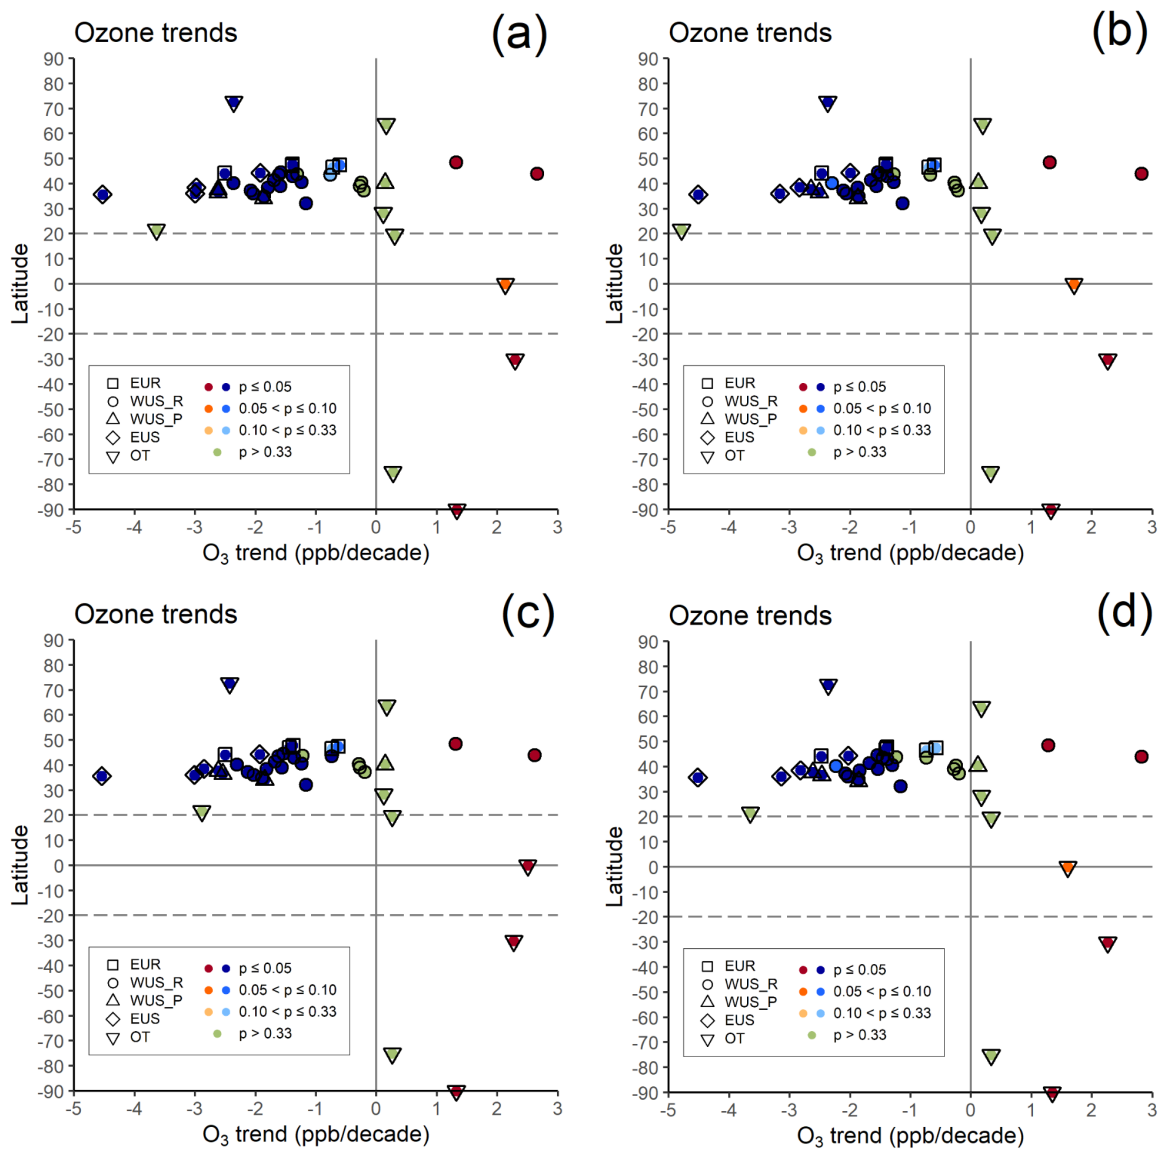

Figure S2: Same as Fig. 2, but with using different thresholds for data availability, i.e., using: (a) a threshold of 66% on hourly data availability, (b) a threshold of 50% on hourly data availability, as in Fig. 2, (c) a threshold of 66% on daily data availability, where the 66% limit is also used for computing daily means, and (d) same as (c), but considering a 50% threshold.

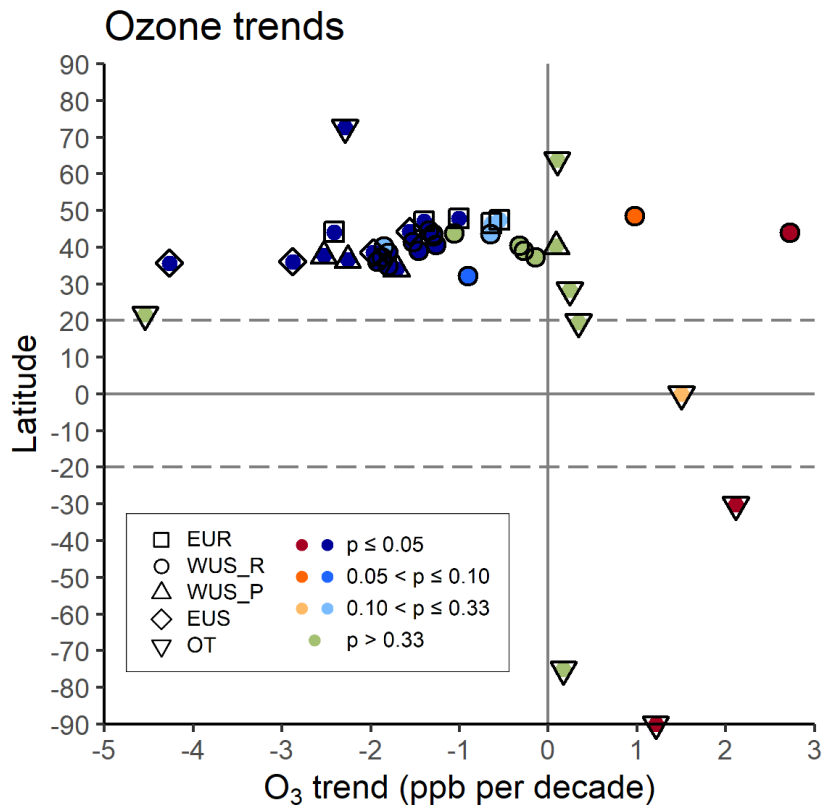

Figure S3. Same as Fig. 2, but in this case the “climatological year” for obtaining the O₃ anomalies was derived by median averaging.

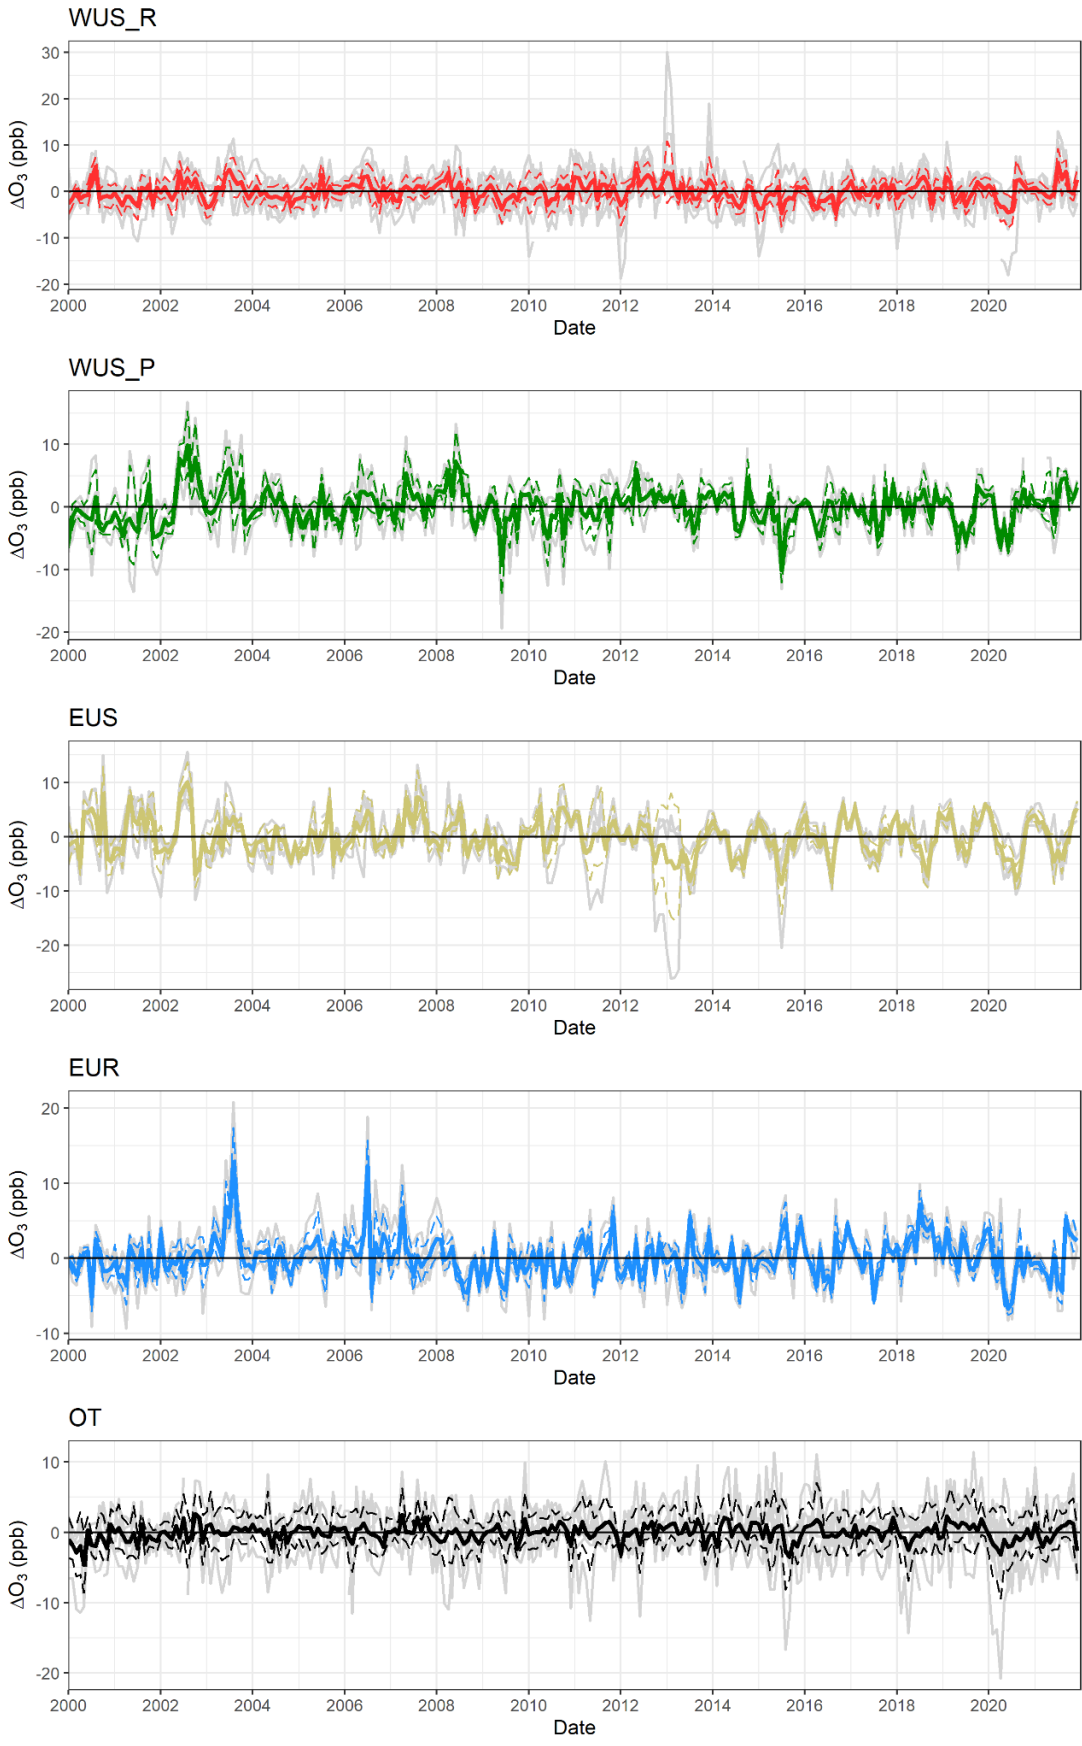

Figure S4: Time series of the monthly O_3 anomalies for the different sites, grouped by region. The thick colored line represents the average time series for each specific region, together with ± 1 standard deviation (dashed lines).

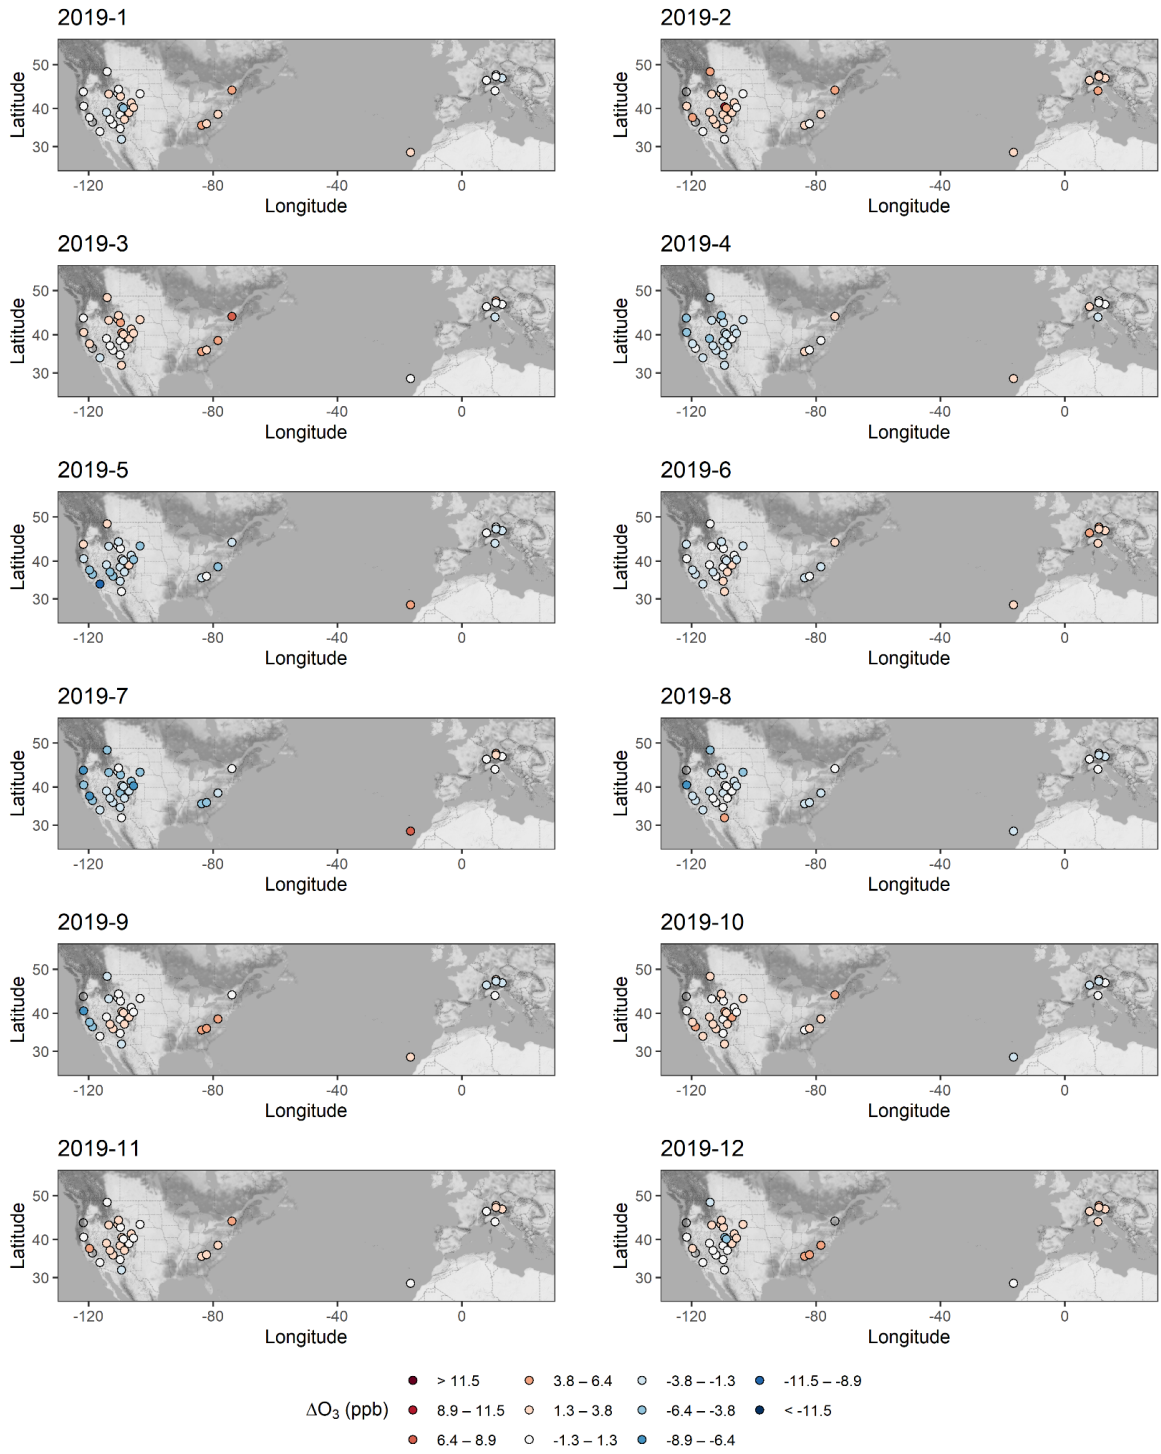

Figure S5. Spatial distribution of the anomalies for the different months of 2019, for sites in North America and Western Europe.

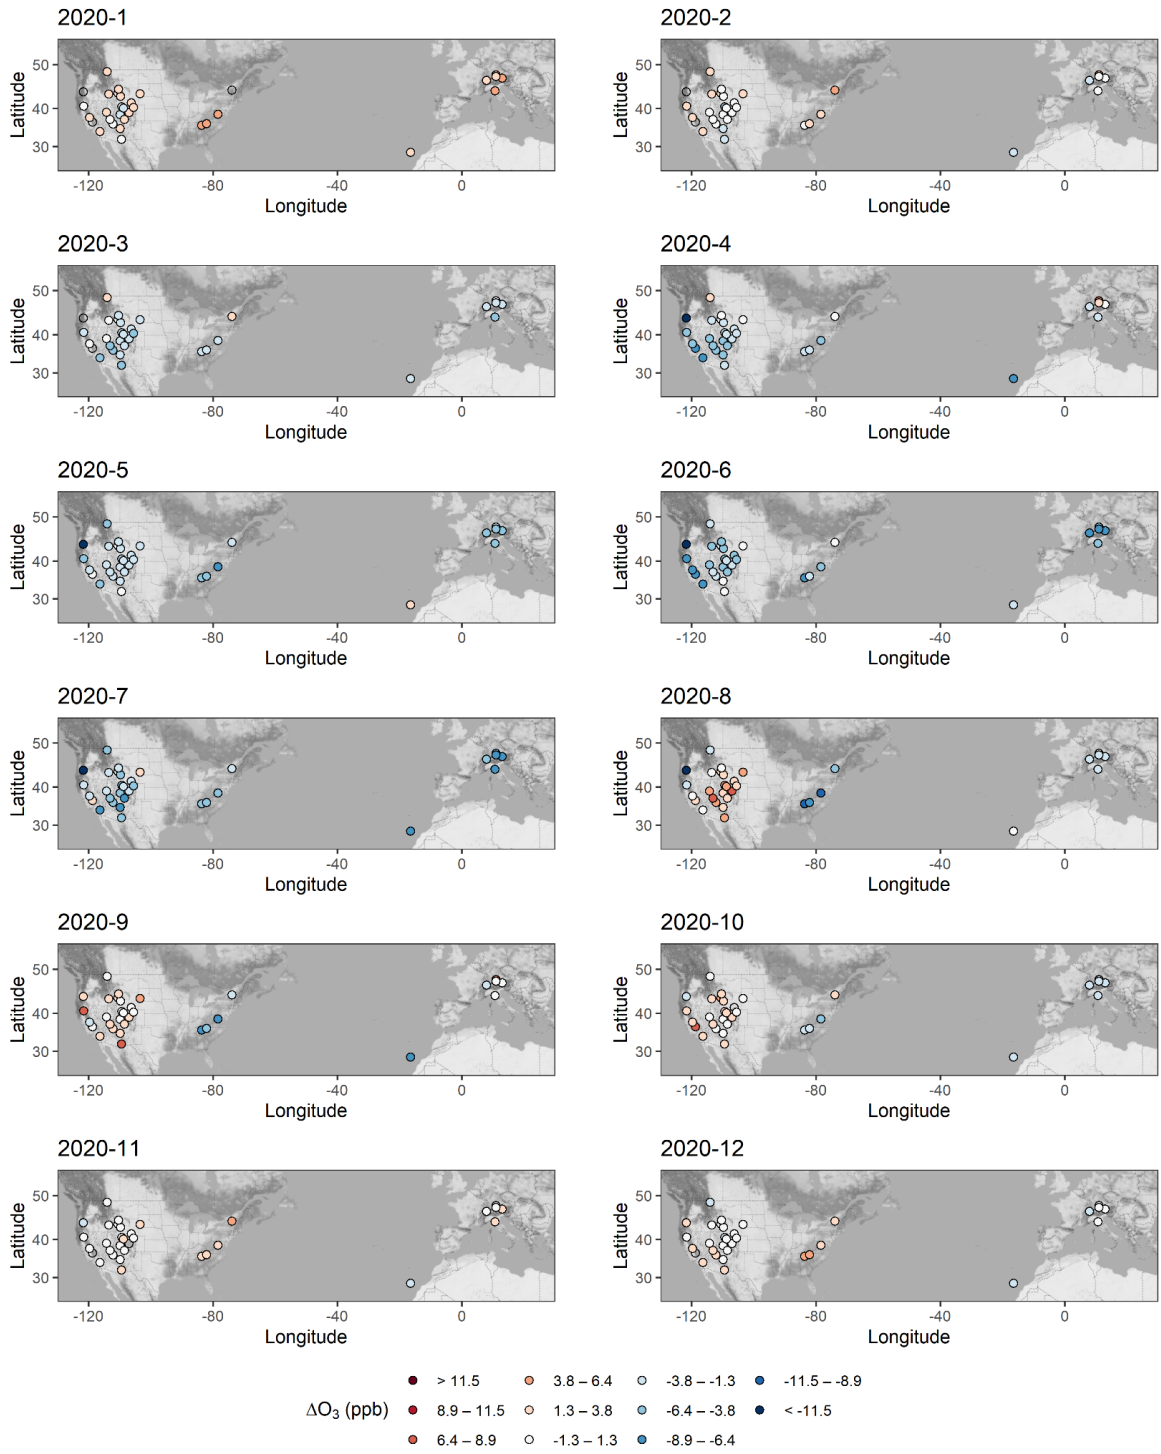

Figure S6. Same as Fig. S5, but for 2020.

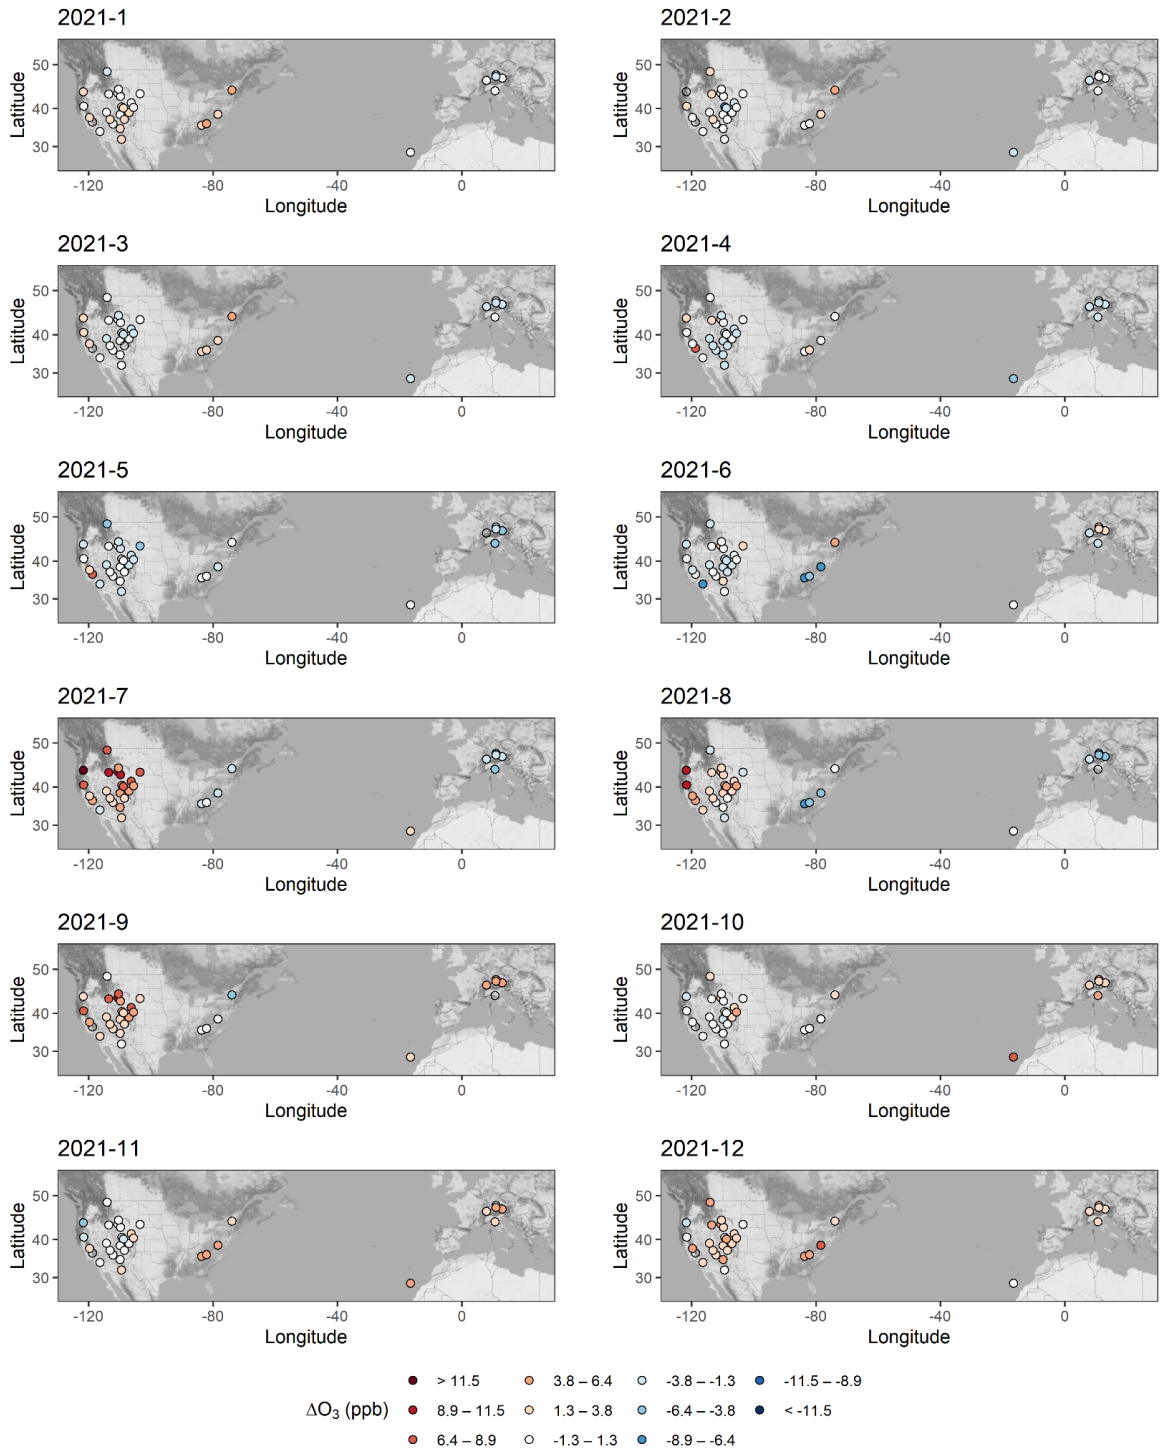

Figure S7. Same as Fig. S5, but for 2021.

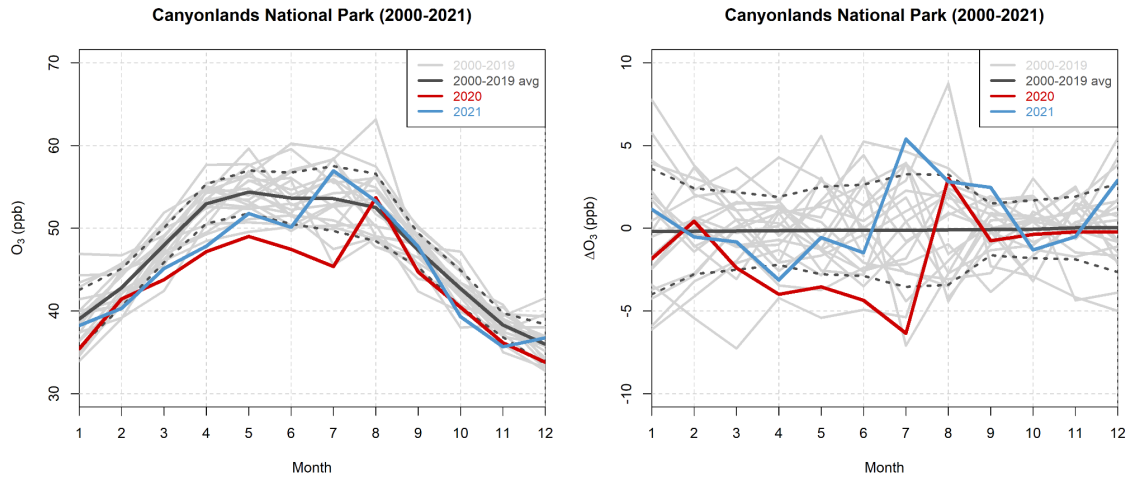

Figure S8: Annual variability of the O₃ monthly averages (left) and anomalies (right) at CAN. The gray lines indicate the single years from 2000 to 2019, the black line is the 2000–2019 climatology (together with ±1 standard deviation, dotted lines), and the red and blue lines indicate 2020 and 2021.
