**Table S1: Tropospheric ozone IASI–sonde drifts (in DU yr<sup>-1</sup> and % yr<sup>-1</sup>) at individual stations over 2008–2023, based on comparisons between IASI-CDR and both smoothed and raw ozonesonde data. Uncertainties are given at the 2σ level. Statistical significance is indicated by p-values, with values ≤ 0.05 shown in bold.**

| station      | lat    | lon     | coverage (%) | iiasi-smoothed drift (DU/yr) | iiasi-smoothed drift (%/yr) | iiasi-smoothed p-value | iiasi-sd drift (DU/yr) | iiasi-sd drift (%/yr) | iiasi-sd p-value |

**Table S2: Tropospheric ozone trends derived from IASI and ozonesonde data (smoothed and raw) at individual stations over 2008–2023. The thermal tropopause is estimated using the World Meteorological Organization thermal definition (WMO, 1957). Uncertainties are reported at the 2σ level. Statistical significance is indicated by p-values, with values ≤ 0.05 shown in bold.**

**Table S3: Table S3. Tropospheric ozone trends over 2008–2019 at individual stations, derived from IASI and ozonesonde data (smoothed and raw), along with trends from the HEGIFTOM dataset. All values are compiled into a single table for direct comparison. The thermal tropopause is defined according to the WMO thermal definition (WMO, 1957). Uncertainties are reported at the  $2\sigma$  level. Statistical significance is indicated by p-values ( $p \leq 0.05$  shown in bold). HEGIFTOM data were extracted from the supplementary table available at <https://egusphere.copernicus.org/preprints/2025/egusphere-2025-1054/>.**
