

Table S1 Geometric means ($\text{ng}/\text{m}^3 \pm \text{standard deviation}$) of indoor (IN) and outdoor (OUT) weekly concentrations for the 17 most abundant elemental species detected at the 4 retirement communities during CHAPS (i.e. Na, Mg, Al, S, K, Ca, Ti, V, Cr, Mn, Fe, Ni, Cu, Zn, Mo, Ba, and Pb). Data were segregated by site (SG1, SG2, SG3, and RIV), season (warmer, W, and the colder, C), and size fraction (quasi-ultrafine, accumulation, and coarse mode PM). The 3 San Gabriel Valley sites and the site in Riverside have been denoted as SG 1, SG 2, SG 3, and RIV, respectively.

Table S2 Geometric means ($\mu\text{g}/\text{m}^3 \pm$ standard deviation) of indoor (IN) and outdoor (OUT) weekly concentrations for PM mass (Mass) and the sum of all measured trace elements (TTE) detected at the 4 retirement communities during CHAPS. Data were segregated by site (SG1, SG2, SG3, and RIV), season (warmer, W, and the colder, C), and size fraction (quasi-ultrafine, accumulation, and coarse mode PM). The 3 San Gabriel Valley sites and the site in Riverside have been denoted as SG 1, SG 2, SG 3, and RIV, respectively.
