

Interactive comment on “Modelling of base cation emissions, concentrations and deposition in the UK” by M. Werner et al.

Anonymous Referee #2

Received and published: 30 November 2010

This article is clear and concise, is based upon appropriate scientific methods, and provides a significant contribution to air pollution issues and effects on the environment. Revisions have been made in relation to my original comments with literature references now consistent. I am happy to recommend publication of the manuscript in its current form.
