Received and published: 3 January 2011

In this revised manuscript, the authors have not responded satisfactorily to the critical comments of the original reviewer #2, who continues to raise concerns in regard to the quality of the observations and accuracy of the analyses. The reviewer believes that the technical problems and uncertainties would cast serious doubt on the key conclusions of the work. Since this is a recurring problem, I recommend that the authors redirect the focus of their paper and submit a new manuscript.
