Review of “Dust aerosol effect on semi-arid climate over Northwest China detected from A-Train satellite measurements” by Huang et al.

Recommendation: Accepted with stated minor revision

General Comments:

The major contribution of this paper is to study the impact of dust aerosols on the semi-arid climate of Northwest China by comparing aerosol and cloud properties over semi-arid regions between China and United States, using surface and A-Train satellite observations during active dust event seasons. They found that the local anthropogenic dust aerosols due to human activity, such as agriculture and industrial activity,

Discussion Paper

accounts for 44% of the average absorbing aerosol index and for 77% of the liquid cloud water path difference between the China and US semi-arid regions. It suggests that the local anthropogenic absorbing aerosols also make some contribution to the regional interaction among aerosol-cloud-radiation-precipitation processes and need to be further investigated. In general, I found that the paper is well written and is appropriate for ACP readers. I recommend the paper for publication with addressing the minor comments listed below.

- Specific Comments:
1. Page 12466, line 23: 'occured' → 'occurred',
 2. Page 12467, line 3: "changes in the climate" → "climate changes",
 3. Page 12467, line 6: "large quantities" → "large amount",
 4. Page 12467, line7: Author should explain whether the FD and BD have the similar visibility less than 10 km.
 5. Page 12467, line 6: "High winds" → "strong winds",
 6. Page 12468, line 19: Among the string 'Clouds and Clouds and Earth's Radiant Energy Experiment (CERES)', the first 'Clouds and ' should be deleted.
 7. Page 12471, line 7: "The thickness of the saturated layer "should be explained in the text as its first appearance.
 8. Page 12472, line 4: "The climate type" → "the type of climate",
 9. Page 12472, line 10: "the northwestern" → "northwestern",
 10. Page 12473, line 2: "the meteorological" → "meteorological",
 11. Page 12476, line 25: 'from late spring and the later summer' should be replace as 'during the late spring and the late summer'
 12. Page 12488, Fig. 4: Author should explain whether Fig.4 is for the spring only or for the whole year.

13. Page 12476, line 2: “the meteorological” → “meteorological”
14. Page 12476, line 4-6: How can the mean RH be 25.3% when there are so many thick saturated layers with RH>85%?
15. Page 12476, line13: Author should explain how is the "saturated layers" defined exactly.
16. Page 12478, line 2: “the evaporation” “evaporation”,
17. Page 12479, line 2: “aerosol” → “aerosols”
18. Page 12479, line 7: “Jing Su et al.” → “Su et al.”,
19. Page 12479, line 13: The sentence reads not correct. I would suggest to change it to “The results presented in this paper are based on satellite observations, which further confirm the semi-direct effect of Asian dust,”
20. Page 12482, line 4: ‘51 (23) 2913–2925, 2006’ should be replace as ‘51 (23), 2913–2925, 2006’
21. Page 12483, line 13: ‘D,’ should be deleted.
