Interactive comment on “Evaluated kinetic and photochemical data for atmospheric chemistry: Volume V – heterogeneous reactions on solid substrates” by J. N. Crowley et al.

S. Le Calve

slecalve@illite.u-strasbg.fr

Received and published: 8 March 2010

Experimental data on Acetaldehyde adsorption on pure ice are available in the literature :

M. Petitjean, Ph. Mirabel and S. Le Calvé, Uptake measurements of acetaldehyde on solid ice surfaces and on solid/liquid supercooled mixtures doped with HNO₃ in the temperature range 203-253K, J. Phys. Chem. A, 113, 5091-5098, 2009.

Consequently, appendix A1 (page 5) and appendix V.A1.18 on CH₃CHO + ice (page 99) should be completed.

Discussion Paper

In addition, acetone study performed by Peynèrnès (2004) has been completed (E. Journet, S. Le Calvé, Ph. Mirabel, Adsorption study of acetone on acid doped-ice surfaces between 203 and 233 K, J. Phys. Chem. B, 109, 14112-14117, 2005).
