Hi Professor Dibb,

I'm currently working on the behaviour of mercury in snow. Just wanted to say that I've found this article extremely useful. I believe it was Jennie Thomas who gave me a copy at the IPY Oslo Science Conference.

My only question is that you mention on p. 13618, l. 19 the "excess Cl-" in the snow, and then on p. 13622, lines 14-15 "extremely low concentrations of halides in both the aerosol and surface snow". Since I'm not a chemist, I find it difficult to reconcile the two statements.

Thanks! Dorothy.
