

Interactive comment on “Observations of ozone production in a dissipating tropical convective cell during TC4” by G. A. Morris et al.

G. A. Morris et al.

gmorris@rice.edu

Received and published: 1 November 2010

Referee: “I would like to see the authors take a shot at what scenario they think best fits what was observed.”

Reply: We have changed the text in the conclusions to indicate that we believe the mechanism labeled, “(1),” is the one we find most likely.
