I note that in the response to Referee #2, there does not appear to be a reply to the Referee's Question #4:

4. Page 17265 1st paragraph: Is the decrease [inserted - i.e. OMI-inferred surface NO₂] also observed in the in-situ data?

It is a seemingly short, but perhaps important question. I believe the Referee would be interested in the response, perhaps with modification to the paper at your discretion. A quantitative answer may improve your paper.
