

Interactive comment on “Unravelling airborne polycyclic aromatic hydrocarbons (PAHs) in southern China using tree-rings of 100-yr old *Pinus Kwangtungensis*” by Y. W. Kuang et al.

Anonymous Referee #2

Received and published: 3 November 2011

This manuscript should undergo a major revision. For most parts of this article, the use of English language is not appropriate, causing the presentation of results to be very confusing. I suggest the authors turn to a native speaker for help in language editing of the manuscript.
