Received and published: 11 May 2011

I will take some responsibility here, since I should have spotted a problem with the Figure quality at the pre-ACPD stage. I agree with the referee that these Figures are difficult to read. This is true even on a computer screen, and even more so on a printout.

I suggest the authors prepare new Figures with larger/clearer labels, and send them to me via email. I will pass these on to the referees (and anybody else making a request).
