

Interactive comment on “Spatial features of rain frequency change and pollution and associated aerosols” by Y. Lin et al.

Anonymous Referee #1

Received and published: 14 March 2011

The revised manuscript satisfies my previous concerns. I find it acceptable for publication subject to some minor grammatical corrections to the introduction.

Technical corrections:

pg 8749, Line 1: 'remain the greatest controversial'

pg 8749, Line 10: 'There were less drizzle' Over urban

pg 8749, Line 11: 'area, the precipitation may shut off or delayed'

pg 8749, Line 15: 'evaporation-entrainment feedback of and polluted aerosol'

pg 8749, Line 17: 'Besides most of studies that show aerosol will inhibit precipitation'
