

Interactive comment on “Reformulating the atmospheric lifecycle of SOA based on new field and laboratory data” by M. Shrivastava et al.

M. Shrivastava et al.

manishkumar.shrivastava@pnl.gov

Received and published: 10 September 2011

We thank referee 1 for a prompt response, but would like to ask the editor to give the referee a chance to complete his/her review before we respond to all the comments. We spend an inordinate amount of time providing detailed response to every one of the referee's comments. The fact that the referee's review was very long and our response detailed made for a long document that we understand takes time to digest. Reading the referee's response clearly demonstrates that he/she did not have the time to evaluate properly our response. Most importantly, the referee states that if given the time he/she would be happy to provide detailed response to all our points. We choose at this point not to provide rebuttal to partial, hurried comments and ask the referee to take the time needed, at which point we will be happy to address each of the comments.
