

## ***Interactive comment on “A multi-model assessment of the efficacy of sea spray geoengineering” by K. J. Pringle et al.***

**K. Alterskjær**

karialt@geo.uio.no

Received and published: 11 April 2012

This manuscript addresses a timely scientific topic and I read it with great interest. I would like to add one clarification: It appears that the citation of Alterskjær et al. (2011) on page 7129 is not entirely correct. We in fact found the most susceptible areas between 30°S and 30°N, not south of 30°S and north of 30°N which is now stated in the manuscript. Beside this comment, I would like to emphasize that this work is interesting and brings useful information on the efficacy of sea salt climate engineering.
