Received and published: 2 November 2012

Many thanks for your comment! Since our manuscript was meant as a review of results published in the literature and presentation of new results derived from the interdisciplinary analysis we carried out, we have tried to summarise its contents in the abstract. Now, after your comment, we have read it again and realise that there are indeed some important conclusions of this paper that deserve mentioning in the abstract. We will reformulate the abstract accordingly when revising the manuscript.
