Interactive comment on "Monitoring high-ozone events in the US Intermountain West using TEMPO geostationary satellite observations" by P. Zoogman et al.

P. Zoogman et al.

pzoogman@cfa.harvard.edu

Received and published: 26 February 2014

The authors would like to thank P. Sellitto for reminding us of this work. We will amend the introduction to acknowledge that UV+Vis observations of ozone from space have recently been performed. The conclusions of the second paper on the potential additional informtaion of Vis channels for lower tropospheric ozone measurements support the work done in this study and will be cited as such.
