Dear reviewer,
thank you for reviewing our paper and your favorable review!

- Page 31266–31623: We are in the process of doing this. The next version of SWIFT will include fit parameters obtained by fitting the SWIFT model to the vortex-averaged 24 hour reaction rates of a Chemistry and Transport Model (CTM). First results show that the parameters for e.g. ozone (d) and HNO₃ (e) compare well with the approach of fitting to satellite data.
