Supplementary Table 1. Percent area contributions from the major proton regions in the ^{1}H NMR spectra for the PSOM aerosol extracts.

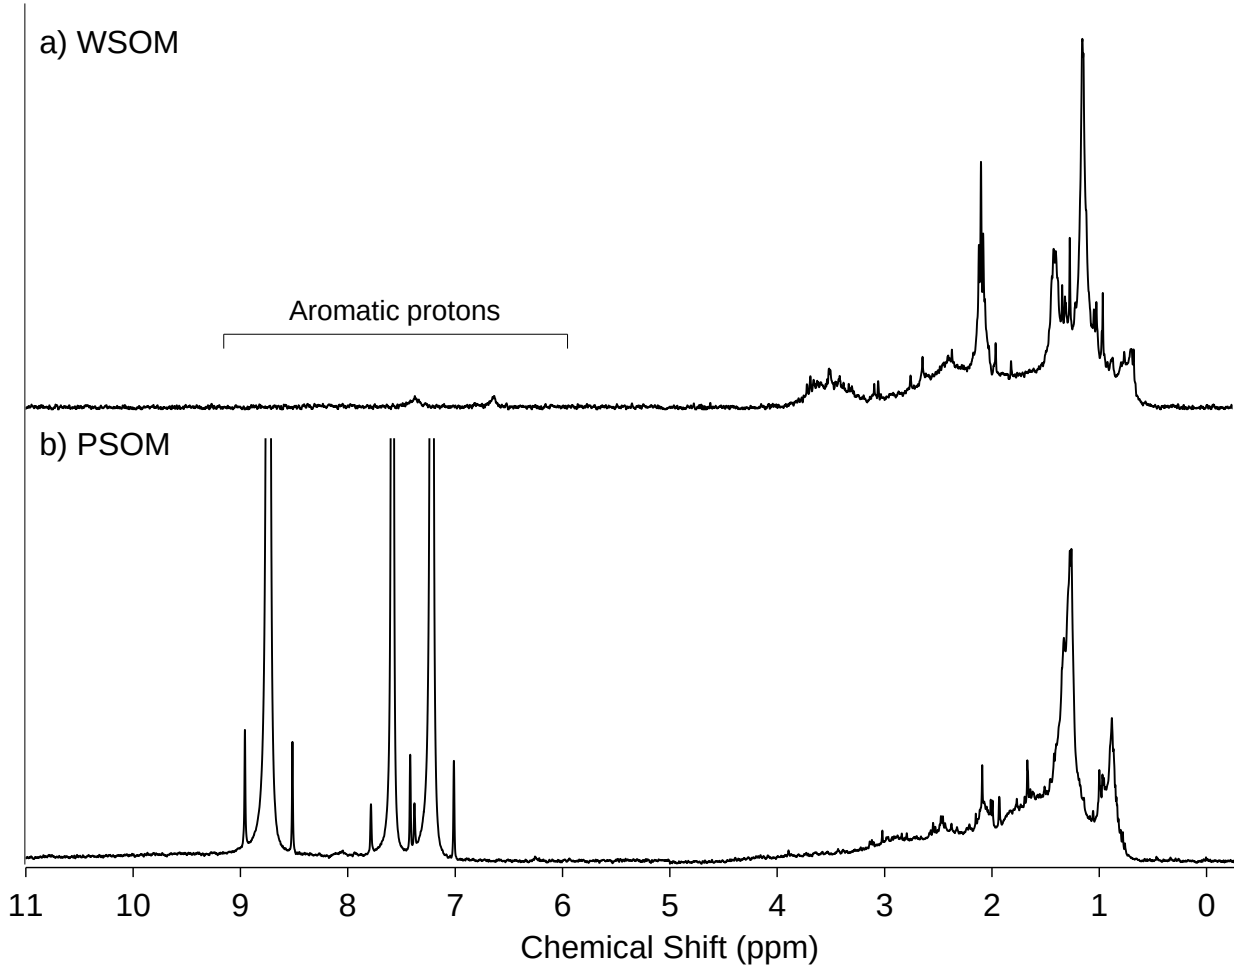
Functional Group Region	Chemical Shift (ppm)	% ^{1}H NMR spectral area		
		16-17 August 2011	24-25 June 2013	25-26 June 2013
H-C-O	0.7 – 1.95	2.5	2.5	6.4
H-C-C=	1.95 – 3.2	18.3	21.0	25.5
H-C	3.2 – 4.4	78.8	76.0	67.0
Calculated H/C		*1.98*	*1.98*	*1.94*

Supplementary Table 2. Percent OC extraction for PSOM extracts using ^{1}H NMR and WSOM using TOC analysis.

Aerosol Sample	Initial OC mass (mg)	Spectral Area (intensity units)	**Calc DOC (mg)	%PSOC	%WSOC (by TOC)
16-17 August 2011	*0.045	2.4×10^{10}	0.041	90.3	37.0 ± 2.2
24-25 June 2013	0.039	1.1×10^{10}	0.021	53.8	54.3 ± 3.8
25-26 June 2013	0.049	9.1×10^{9}	0.018	36.5	60.3 ± 3.6
Glucose	0.114	2.5×10^{9}	-	-	-

*There is a known error in the initial mass measurement of this aerosol, and was omitted from the results

**Calculated by multiplying the spectral area by the glucose response factor (2.6×10^{11} intensity units/mg H), and then converting mg H to mg C using the H/C ratio calculated in Supplementary Table 1.



Supplemental Figure 1. Full ^{1}H NMR spectra for a) WSOM and b) PSOM for the aerosol particulate sample collected 25-26 June 2013. The strong signal (off scale) in the PSOM spectra in the aromatic region is from protons that have been exchanged in the pyridine-D_5 solvent, which overwhelms any possible aromatic signal from the sample.
