

Final Remark: “Denitrification by large NAT particles: the impact of reduced settling velocities and hints on particle characteristics”

Atmos. Chem. Phys. Discuss., 14, 5893-5927, 2014

W. Woiwode et al.

Dear Editor,

Dear Referee #2,

thanks a lot for helping to improve our manuscript and for your kind patience. All corrections suggested by Referee #2 are now implemented into the revised manuscript.

When compiling the final version, I noticed that a short passage (In the vertical regions ...temperature fluctuations, P12/L19 – L13/L2) got lost when compiling the previous version. This section was however in a slightly different version subject to the review of a previous version of the manuscript (acp-2014-43-manuscript-version3.pdf) and is now included. Therefore, the manuscript uploaded now includes a few more lines of text than the previous version.

Thank you very much!

With best regards,

Wolfgang Woiwode
