Received and published: 17 April 2015

The manuscript present new and interesting results. Unfortunately, one of the reviewers mis-understood the concept of ACP/ACPD: Instead of submitting a "quick review" he already provided a full review which suggested publication of the manuscript after minor changes. These comments were already addressed before the discussion phase and are therefore not visible to the public. In order to not further delay the process I decided to accept the manuscript although we had only one public review in the discussion phase. Both reviews were in favor of publishing after minor changes.
