

Interactive comment on “Ice nucleation terminology” by G. Vali et al.

K.S. Carslaw (Editor)

k.s.carslaw@leeds.ac.uk

Received and published: 19 August 2015

The authors of this paper wished to define terminology for ice nucleation that represented, as far as possible, the consensus of the research community. The review process of the paper was therefore unconventional and fully exploited ACP's interactive peer review process. There have been reviews from three referees plus comments from seven scientists, including three who have represented research groups. All these comments and the authors' responses are available to view in the ACP Interactive Discussion. To enable continued peer commenting, the revised versions of the paper were submitted by the authors as author comments on 8 Dec 2014 and 6 May 2015, and are also available to read in the Interactive Discussion.
