3 the coefficients of variation (CVs). The last line shows the average 90% confidence intervals of the total emissions during 2005-2010.

4 ^a “Other sectors” represent biomass open burning for NO_X, SO₂, and PM_{2.5}; for NMVOC, they include biomass open burning, waste treatment, cooking, and
5 smoking, with biomass open burning contributing over 80% of the total NMVOC emissions from these sources.
