Received and published: 3 June 2014

The authors have submitted a revised version of the manuscript along with their response to the two critical reviews. I have examined the rather extensive revisions undertaken by the authors and I would like to encourage them to submit a revised version of their manuscript for further evaluation. The authors may want to make the following minor corrections during the preparation of the revised version: 1). The term “Ar-D” is used in the abstract and in the text without definition. Please define “Ar-D” and “ND” somewhere earlier in the text (not in the Figure 1 caption). 2). The phrase “Dusty days were predicted. . .” is a little misleading – I would suggest rewording it. 3). The parameter  $f$  is dimensionless; the dimension listed in Table should be removed. 4). Caption to

C3112

Figure 1 should have “and” moved before “Arabian dusty” 5). Top panel in Figure 1 is incorrectly labelled as “D-Ar-2013” instead of “Ar-D-2013” 6). The captions used in the supporting information section are perhaps too brief. I would recommend expanding them.
