Section 3.3 deals with description of the process to calculate the pollutant concentration from targeted sectors i.e transportation, power, industry and domestic. Procedure to estimate concentrations from one sector is described in detailed and similar methodology is adopted to calculate concentrations from power, industry and domestic sectors. The corrected description is " This process was repeated to estimate the concentrations from power and industry. the fourth sector i.e. domestic was estimated by difference between the four simulations (base plus three sector removed runs)".

The typo in the line 20 for section 3.3, p 10036 , p 10039 are corrected in the final submission of the manuscript.
