

Interactive comment on “Seasonal variability of atmospheric nitrogen oxides and non-methane hydrocarbons at the GEOSummit station, Greenland” by L. J. Kramer

Anonymous Referee #3

Received and published: 22 July 2014

The other reviewers have given extensive comments that I generally agree with, so I will not add any more.

The data set presented here is unique and valuable and should be published. It will be particularly useful if the NO_x, NO_y, O₃ data (Fig.1) is shown consistently with the NMHC data (Fig. 4), in particular if the full time series is shown, not averaged over the 2 years (as is currently in Fig. 1). If the authors address the other reviewers comments I expect the paper will be acceptable for publication.
