Received and published: 28 July 2014

It is a very interesting paper. Would the author consider having another 1-2 tables to provide the information of emission fluxes and atmospheric loadings of different minerals? This will be very useful, and I presume it is readily available from the modeling work. Most of previous studies, as far as I know, have not provided similar information (e.g. Claquin et al., 1999; Huneus et al., 2011; Nickovic et al., 2012)
