As suggested by D. Stone we have now referenced both studies by Stone et al. (2013) and (2014) several times in our discussion. In addition, we have carried out a sensitivity study adopting the kinetic data by Taatjes et al. (2013) in chapter 3.4 for CH₃CHO. A similar estimate for CH₂O was not done since their time scale for unimolecular decomposition is not known to us.
