Received and published: 2 December 2014

1. In the revised manuscript both in the title and abstract it is stated that it is a proposed mechanism. 2. In the revised manuscript the calculation presented are based on model atmospheres provided by Dr. Feofilov (Referee #1) and Dr. Lopez-Puertas (Referee #2). 3. The results of the calculations for the four atmospheres are presented in the from of Tables for six altitudes between 90 and 105 km altitude for each atmosphere.
