

Dear Frank,

I am resubmitting the paper now with the revised title:

Ice Melt, Sea Level Rise and Superstorms: Evidence from Paleoclimate Data, Climate Modeling, and Modern Observations that 2°C Global Warming Could Be Dangerous

For consistency with the title, I changed “would be dangerous” in the abstract to “could be dangerous.”

I also corrected a typo on page 1 (Kwok-Wai Lo instead of Kwak Wai Lo) and in the legend of Fig. 30(a) the identification of the green and orange curves were interchanged.

We appreciate more than ever the merits of the “Discussion” phase of your journal and the open refereeing system. We realize that the paper was unusual, and are grateful to you for seeing through the review process. We will try not to write such a long paper the next time!

Best regards, Jim Hansen
