

Interactive comment on “PLAM – a meteorological pollution index for air quality and its applications in fog-haze forecasts in north China” by Y. Yang et al.

J. B. Brandt (Editor)

jbr@envs.au.dk

Received and published: 10 December 2015

The paper has been through a review process. However, it has only been possible to receive one thorough review report during the process. As the editor, I have read the paper carefully and agree with the comments in the review report. The authors have responded carefully to each comment and corrected the paper accordingly. The manuscript thereby meets the review criteria and is accepted for publication in ACP.
