## ***Interactive comment on “CFD modeling of a vehicle exhaust laboratory sampling system: sulfur driven nucleation and growth in diluting diesel exhaust” by M. Olin et al.***

### **Anonymous Referee #2**

Received and published: 1 April 2015

As I had pointed out in my review, the paper of Olin et al is a very interesting and useful for exploring mechanisms for nucleation events during diesel exhaust sampling. The revised version is even better, incorporating appropriately the comments. I found that the material that I recommended has been adequately included, making the whole work more reliable. I have not any additional comment; I think that the paper is very good.
