Received and published: 1 March 2016

I would like to thank authors for their detailed responses to reviewers and acknowledge their effort for further data analysis that should significantly improve the manuscript. Reading authors responses, I have two recommendations for the the revised version, a specific one and two more general ones :

-I do not support the idea of keeping in the paper the Figure 1 (algorithm), already published in Gkikas et al., ACP, 2013.

-I invite authors using supplementary material for a number of figures that are not essential to the main objectives of the paper but will help supporting the discussions.

-I invite authors paying attention to clarify in the revised version all issues raised by  
C12876

reviewers, not leaving comments useful to readers only in their responses.
