Interactive comment on “Statistical exploration of gaseous elemental mercury (GEM) measured at Cape Point from 2007 to 2011” by A. D. Venter et al.

Anonymous Referee #1

Received and published: 5 March 2015

The authors have evaluated a continuous elemental mercury data set from a GAW site in South Africa. The paper is well written and the results explained, evaluated and presented in a very clear and concise manner.

I recommend publication as is in its current form.
