

Interactive comment on “Advantages of city-scale emission inventory for urban air quality research and policy: the case of Nanjing, a typical industrial city in the Yangtze River Delta, China” by Y. Zhao et al.

Anonymous Referee #2

Received and published: 14 September 2015

The manuscript is complete and excellent. It would be a great addition (perhaps in Supplementary Information?) to discuss uncertainty in a sector by sector fashion. It may be unrealistic to perform a detailed spatial/temporal sector by sector uncertainty analysis but it may be a good complement to the already thorough analysis.
