

Interactive comment on “Mediterranean desert dust outbreaks and their vertical structure based on remote sensing data” by A. Gkikas et al.

Anonymous Referee #1

Received and published: 9 November 2015

General Comments:

The paper is generally well written. However, taking into account the review of the 1st reviewer, with whom I fully agree, the authors still fail to convince that they have used the MODIS AE-FF data, only over the sea. This is very important to implement.

Specific comments: The issue of using the MODIS AE-FF data, only over the sea, is not clearly presented in the current version of the manuscript. In the annotated text, this is well noted and the authors should consider it very carefully.

Technical Comments: In the annotated text several technical corrections have been given. The authors should implement them in their manuscript.
