Interactive Comment

Interactive comment on "The importance of temporal collocation for the evaluation of aerosol models with observations" by N. A. J. Schutgens et al.

Anonymous Referee #2

Received and published: 1 December 2015

The paper investigates the errors due to temporal sampling by comparing aerosol data from three global models with satellite (MODIS) and ground-base (AERONET) datasets. The authors convincingly demostrate the importance of temporal collocation even for data averaged over a long period. The study is methodologically important for model/remotely sensed data comparions in general. The paper is clearly written and may be published as is.
