I found the review a little hard to navigate. For example there is information on the individual channels (i.e rate constant of reaction at specific sites in the hydrocarbons) but these are buried in the comments. It would be helpful if information relating to this aspect was provided in the introduction.

I also think the document needs a list or index of the reactions that are evaluated and for which recommendations are made. It may be better to have a summary with recommended expressions for k , or a page number where the same could be found or (on the web version) a link from the table to the section.
