

Interactive comment on “Simulation of ozone production in a complex circulation region using nested grids” by M. Taghavi et al.

Anonymous Referee #1

Received and published: 15 September 2003

The second version of the paper is an improved draft. I can accept the paper for publication in the ACP journal since it contains innovative and high quality scientific work in coupling a meteorological model with a chemistry module. The application is well also presented and this makes the paper an original scientific work.

However, I am not satisfied with the presentation of the paper. The paper seems to be presented as a technical report and I will ask the authors to drastically improve the presentation before the paper is accepted for publication.
