

Interactive comment on “Investigation of airborne foot-and-mouth disease virus transmission during low-wind conditions in the early phase of the UK 2001 epidemic” by T. Mikkelsen et al.

T. Mikkelsen et al.

Received and published: 19 November 2003

We received two positive and enlightning comments to our article on airborne Food-and-Mouth Disease spread during stable stratified conditions over England during the UK 2001 Outbreak.

The referees comments sets the article in greater perspective, both with respect to modelling of dispersion over complex terrain, and also with respect to the need for good modelling capabilities in the active (real-time) combatment of disease outbreaks. Although the referees Comments havent necessitated any changes in the original sub-mitted manuscript the authors are nevertheless very greatfull for their contribution.
